interdisciplinary study argues that recent advances in the social and cognitive sciences demonstrate that knowing involves

not only our physical bodies but also our tools our communities and our social institutions As important as these discoveries are for understanding general cognition they are even more important for understanding the nature of faith The Bible is rich with metaphors that emphasize the living church as a source of wisdom and spiritual depth We always need other Christians if our faith is to be both rich and deep We are like groves of aspen trees individual trees that are connected at the roots

**Turn Down the Heat** A Report for the World Bank by the Potsdam Institute for Climate Impact Research and Analytics.,2013-06-19 This report focuses on the risks of climate change to development in Sub Saharan Africa South East Asia and South Asia Building on the 2012 report Turn Down the Heat Why a 4 C Warmer World Must be Avoided this new scientific analysis examines the likely impacts of present day 2 C and 4 C warming on agricultural production water resources and coastal vulnerability It finds many significant climate and development impacts are already being felt in some regions and that as warming increases from present day 0 8 C to 2 C and 4 C multiple threats of increasing extreme heat waves sea level rise more severe storms droughts and floods are expected to have further severe negative implications for the poorest and most vulnerable The report finds that agricultural yields will be affected across the three regions with repercussions for food security economic growth and poverty reduction In addition urban areas have been identified as new clusters of vulnerability with urban dwellers particularly the urban poor facing significant vulnerability to climate change In Sub Saharan Africa under 3 C global warming savannas are projected to decrease from their current levels to approximately one seventh of total land area and threaten pastoral livelihoods Under 4 C warming total hyper arid and arid areas are projected to expand by 10 percent In South East Asia under 2 C warming heat extremes that are virtually absent today would cover nearly 60 70 percent of total land area in northern hemisphere summer adversely impacting ecosystems Under 4 C warming rural populations would face mounting pressures from sea level rise increased tropical cyclone intensity storm surges saltwater intrusions and loss of marine ecosystem services In South Asia the potential sudden onset of disturbances to the monsoon system and rising peak temperatures would put water and food resources at severe risk Well before 2 C warming occurs substantial reductions in the frequency of low snow years is projected to cause substantial reductions in dry season flow threatening agriculture Many of the worst climate impacts could still be avoided by holding warming below 2 C but the window for action is closing rapidly Urgent action is also needed to build resilience to a rapidly warming world that will pose significant risks to agriculture water resources coastal infrastructure and human health
