

Chapter 4 Atomic Structure

Section 4.2 The Structure of an Atom**(pages 108–112)**

This section compares the properties of three subatomic particles. It also discusses atomic numbers, mass numbers, and isotopes.

Reading Strategy (page 108)

Monitoring Your Understanding Before you read, list in the table shown what you know about atoms and what you would like to learn. After you read, list what you have learned. For more information on this Reading Strategy, see the **Reading and Study Skills** in the **Skills and Reference Handbook** at the end of your textbook.

What I Know About Atoms	What I Would Like to Learn	What I Have Learned
Most students will know that atoms are the “building blocks” of matter, and some may know that atoms contain subatomic particles.	Based on the title of the section, students may say that they want to learn more about the structure of atoms.	

Properties of Subatomic Particles (pages 108–109)

- What are three subatomic particles?
a. Protons b. Electrons c. Neutrons
- Circle the letter that identifies a subatomic particle with a positive charge.
a. nucleus **(b)** proton
c. neutron d. electron
- Why did Chadwick conclude that the particles produced by his experiment were neutral in charge? A charged object did not deflect the paths of the particles.

Comparing Subatomic Particles (pages 109–110)

- Circle the letters of properties that vary among subatomic particles.
a. color **(b)** mass
(c) charge **(d)** location in the atom
- Circle the letter of the expression that accurately compares the masses of neutrons and protons.
(a) mass of 1 neutron = mass of 1 proton
b. mass of 2000 neutrons = mass of 1 proton
c. mass of 1 electron = mass of 1 proton
d. mass of 1 neutron = mass of 1 electron

Materials Principles and Practice Charles Newey,Graham Weaver,2013-10-22 Materials Principles and Practice deals with materials science in the technological context of making and using materials Topics covered include the nature of materials such as crystals an atomic view of solids temperature effects on materials and the mechanical and chemical properties of materials This book is comprised of seven chapters and begins with an overview of the properties of different

kinds of material the ways in which materials can be shaped and the uses to which they can be put The next chapter describes the state of matter as a balance between the tendencies of atoms to stick together by chemical bonding or rattle apart by thermal agitation paying particular attention to ionic bonds and ionic crystals the structure and properties of polymers and transition metals The reader is also introduced to how the structure of materials especially microstructure can be manipulated to give desired properties via thermal mechanical and chemical agents of change This text concludes by describing the chemistry of processing and service of various materials Exercises and self assessment questions with answers are given at the end of each chapter together with a set of objectives This monograph will be a valuable resource for students of materials science and the physical sciences **Glencoe Physical Science** ,1999 **New York Medical Journal** ,1907
