Knowledge Management and Information Tools for Building Maintenance and Facility Management Cinzia

Talamo, Marcella Bonanomi, 2015-10-29 This book describes the latest methods and tools for the management of information within facility management services and explains how it is possible to collect, organize and use information over the life cycle of a building in order to optimize the integration of these services and improve the efficiency of processes. The coverage includes presentation and analysis of basic concepts, procedures and international standards in the development and management of real estate inventories, building registries and information systems for facility management. Models of strategic management are discussed and the functions and roles of the strategic management center explained. Detailed attention is also devoted to building information modeling (BIM) for facility management and potential interactions between information systems and BIM applications. Criteria for evaluating information system performance are identified and guidelines of value in developing technical specifications for facility management services are proposed. The book will aid clients and facility managers in ensuring that information bases are effectively compiled and used in order to enhance building maintenance and facility management.

Energy Performance of Buildings 2008: Special Report ,

Building Information Modeling Karen Kensek, 2014-04-16 This is a design guide for architects, engineers and contractors concerning the principles and specific applications of building information modeling (BIM). BIM has the potential to revolutionize the building industry and yet not all architects and construction professionals fully understand what the benefits of BIM are or even the fundamental concepts behind it. As part of the Pocket Architecture Series, it includes two parts: fundamentals and applications, which provide a comprehensive overview of all the necessary and essential issues. It also includes case studies from a range of project sizes that illustrate the key concepts clearly and use a wide range of visual aids. Building Information Modeling addresses the key role that BIM is playing in shaping the software tools and office processes in the architecture, engineering and construction professions. Primarily aimed at professionals, it is also useful for faculty who wish to incorporate this information into their courses on digital design, BIM and professional practice. As a compact summary of key ideas, it is ideal for anyone implementing BIM.

Getting to Grips with BIM James Harty, Tahar Kouider, Graham Paterson, 2015-12-14 With the UK government's 2016 BIM threshold approaching, support for small organisations on interpreting, filtering and applying BIM protocols and standards is urgently required. Many small UK construction industry supply chain firms are uncertain about what Level 2 BIM involves and are unsure about taking first steps towards having BIM capability. As digitisation increasingly impacts on work practices, *Getting to Grips with BIM* offers an insight into an industry in change, supplemented by practical guidance on managing the transition towards more widespread and integrated use of digital tools to manage the design, construction and whole life use of buildings.

Integrated Project Delivery for

Building Infrastructure Opportunities Howard McKew, 2023-12-12 This book examines in great detail the D B and IPD methods while touching on D B B and CM project deliveries In this vein the discussion regarding IPD is a variation from ASHRAE Technical Committee TC 7 1 Integrated Building Design IBD with the focus herein on HVAC Led IPD Opportunities by consulting engineers and mechanical contractors This IPD variation is also described later in the book as a 21st century version of what was 20th century D B project delivery although D B project delivery is still widely used

Building Maintenance Processes and Practices Abdul Lateef Olanrewaju, Abdul-Rashid Abdul-Aziz, 2014-11-14 This book is designed to be an inclusive for the best practice approach to building maintenance management where the processes procedures and operational systems meet a high standard of professional and academic competence It offers a different perspective on building maintenance management by presenting the schematic building maintenance value chain model and its implementation in Malaysian university buildings The findings show an improvement to building performance lower maintenance cost building sustainability and increased maintenance service user satisfaction The learning outcomes and summaries provided for each chapter and the extensive use of tables and figures add to the readability of the text Though the book is based on data from Malaysia it is useful for a much wider audience and the informal writing style makes it an interesting reference source This book is valuable for readers who are practitioners professionals and for academic institutions that offer courses in the building field including architecture quantity surveying civil engineering building and facility management property management real estate It will also be of interest to governments and others involved in the construction industry
