Viability and Sustainability of Small-Scale Fisheries in Latin America and The Caribbean Silvia Salas, María José Barragán-Paladines, Ratana Chuenpagdee, 2018-06-07 One of the main goals in fisheries governance is to promote viability and sustainability in small scale fishing communities This is not an easy task given external and internal pressure

including environmental change and competition with other economic sectors searching for development in the coastal region. This book contributes to the global effort by offering knowledge, insights and lessons about small scale fisheries in Latin America and the Caribbean. The 20 case studies included in the book make explicit the various dimensions that are intrinsic to small scale fisheries in the region and identify conditions and situations that affect the wellbeing of fishing communities. The book offers insights regarding the challenges faced by small scale fisheries in the region and aligning with the objectives of the SSF Guidelines provides lessons and experiences about how to make small scale fishing communities viable while maintaining sustainable fisheries. This important book illustrates the complexity, diversity and dynamics of small scale fisheries in the Latin American and Caribbean region and presents experiences, tools and approaches to lead towards sustainable and viable fisheries. The reader will gain a new understanding on the range of actions, approaches and information needed for their successful management. John F. Caddy, International Fisheries Expert. This book prepared by the Too Big To Ignore partnership constitutes a very valuable resource for policy makers, fisheries scientists, non governmental organizations, civil society organizations and fishing communities interested in putting in place sound management strategies, research and actions to contribute to the sustainability of small scale fisheries and food security in Latin America and the Caribbean region. The Drava River Dénes Lóczy, 2018-08-24. This monograph summarizes the environmental issues concerning the channel and the floodplain of the Drava River. It describes the diverse forms of human impact: river regulation, damming and reservoirs, dredging etc. and the environmental changes of hydrological regime, sediment transport, biodiversity etc. involved. The transboundary nature of the river is emphasized and the resulting problems are outlined. Special attention is devoted to the evolution and present condition of the floodplain, drainage pattern, oxbow lakes and their vegetation. The possible solutions to environmental problems are illustrated by a review of ongoing and planned rehabilitation measures. The book is amply illustrated with maps, cross sections, diagrams and photographs. The international team of authors representing all countries crossed by the Drava River (Austria, Slovenia, Croatia and Hungary) approach the topic from different aspects. Thus the reader is provided with a comprehensive picture of this up until now little studied European river.
