

OPERATOR'S MANUAL

RT300-1

Revised: May 2006

12261-312

CONSTRUCTION AND INDUSTRIAL EQUIPMENT PRODUCT SAFETY

It is the responsibility of the owner of the construction and industrial equipment products to be knowledgeable about federal, state and local regulations that affect the total usage of the equipment, and responsibility to working personnel and the public. Since regulations are subject to change, and also differ from one local to another, this manual makes no attempt to provide such information.

Terex Cranes provides appropriate operation and maintenance manuals for various construction and industrial equipment products that it manufactures and sells. In addition, where applicable, appropriate national consensus standards, industry standards and safety related manuals are included with the Terex manuals in the shipment of each product. It is company policy to provide the information for the owner or user of the equipment. It is expected that the owner or user will utilize these manuals and standards to provide the appropriate information and training to those people who are to operate, maintain and supervise the use of equipment in a proper and safe manner.

Construction and industrial equipment is designed and manufactured to perform repeatedly work. Under normal usage, the equipment will wear. For this reason, it is

essential that the personnel evaluate and perform a periodic inspection of the equipment. The objective of inspection programs is to prevent accidents, reduce downtime, and keep the equipment working efficiently. These inspection programs should be designed to discover worn, cracked, broken or deteriorated parts and loose or missing fasteners before they result in a problem.

Proper training and inspection programs are essential to avoiding injury to persons, damage to property and excessive maintenance costs.

Read and understand the manuals provided with the equipment. Assistance is available from the salesperson of your Terex product and from the Terex manufacturing facility.

WARNING

When operating a hydraulic crane, the operator should realize that hydraulic and structural competence, **NOT TOPPING LOADS**, is often the determinant of lifting capacity.

Therefore, the OPERATOR MUST BE GUIDED SOLELY BY THE APPROPRIATE MANUFACTURER'S LIFTING CHART when considering load weights. The manufacturer rated loads must never be exceeded.

Follow the recommended operating and maintenance procedures and keep your machine operating at MAXIMUM EFFICIENCY. Use the Suggested Crane Periodic Inspection Check List provided. In addition, use STRONGLY URGES that a MAINTENANCE LOG be kept in conjunction with all maintenance performed on the machine.

If you desire any special information regarding the care and operation of the machine, we will gladly furnish it upon request. Because we build

various types of equipment, we ask that you include your machine model and serial number in all correspondence so that we can provide the correct information.

The information, specifications, and illustrations in this publication are based on the information in effect at the time of approval for printing. We reserve the right to make changes at any time without obligation.

contractors are imparting texture into a material with inherent variability in both stiffness and plasticity Concrete changes from batch to batch and it changes within a batch The wind and the sun play a major role as does the timing of the concrete mixing transport placement and eventually the texturing and curing the latter being important for acoustical durability
