Introduction

- **Optical block access** is a prerequisite for all procedures, so that section should be followed first.
 - If you plan to have your optical block rebuilt, or if you purchased a replacement optical block, you should then proceed to the **Optical block replacement** section, and you can ignore the cleaning and disassembly sections.
 - If you plan on trying to clean your own optical block, skip the replacement section and proceed directly to the **Optical block cleaning** section.
 - If you want to do a very thorough cleaning and/or inspection of the internal parts of your optical block, proceed on to the **Optical block disassembly** section after completing the initial cleaning section.

Disclaimer

Attempting to remove and/or dismantle an optical block should probably be reserved for those experienced with such procedures. You will have to decide whether you are capable of doing it. And you are doing it at your own risk, as it could result in damage to your TV, and, although unlikely, injury to yourself. It will likely void any warranty you might have left, if any. To help ensure a smooth re-assembly at the end, you should carefully label all electrical connections, including orientation of wires in the connectors. You should also carefully note which screws are used to attach specific components.

Soares,2012-12-06 Fibre Optics has gained prominence in telecommunications data transmission and distribution cable television networks sensing and control light probing and instrumentation The 1990 s shows an increased expansion of optical fibre networks which respond to the rapid growth on a world scale of long distance trunk lines combined

with a family of emerging optical based services in which fibre to the home will have the greatest impact There is already evidence that optical communications are moving toward higher bit rates wavelength transparency and irrelevance of signal formats The rate of change in fibre optics and the emergence of new services will be a mere consequence of economics The actual increasing of cost and the demand for high data rates or large bandwidth per transmission channels and the lack of available space in the congested conduits in urban areas strongly favour the technological change to fibre optics The recognised advantages of fibre optic technologies and the unchallenged potential to respond to future needs requires the inclusion of fibre optics networking into new installations Concomitantly current progress in the field of optical fibres optical fibre amplifiers optical fibre switching WDM fibre gratings etc unfold major technical advances and greater flexibility in the designs and engineering of networks optical fibre components and instrumentation The explosion of growth in fibre sensors fibre probes and the myriad of fibre based components shows that we are only using a fraction of optical fibre potential
