range of questions from the smallest fundamental particles to the large scale structure and history of the entire universe But there are always more questions Suitable for a wide aud **Laser Physics** Simon Hooker,Colin Webb,2010-08-05 In this book the interaction of radiation and matter and the principles of laser operation are treated at a level suitable for fourth year undergraduate courses or introductory graduate courses in physics chemistry or engineering The factors which determine efficiency wavelength coverage output power and beam quality of the different classes of laser are treated both in terms of fundamental theory and practical construction aspects Details of established types of solid state semiconductor and gas lasers are examined together with the techniques that enable their output to be converted widely across the spectrum The latest advances in high power fibre lasers femtosecond lasers and X ray lasers are explained The text is liberally illustrated with more than 300 diagrams An extensive bibliography is provided together with numerical problems in each chapter Solutions are available via the web **Laser Safety** Ken Barat,2017-12-19 New chapters and updates highlight the second edition of Laser Safety Tools and Training This text provides background information relating to lasers and laser safety and examines the components of laser work and laser safety from a different perspective Written by a working laser safety officer the book considers ways to keep users as well as those around them safe The author encourages readers to think beyond protective eyewear As it relates to safety he determines that if eyewear is required then the laser system is not ideal This book factors in optics the vibration elements of the optical table the power meter and user training elements that are not commonly considered in the context of laser safety It presents ways for users to evaluate the hazards of any laser procedure and ensure that they are following documented laser safety standards The material serves as a fundamental means or road map for laser users seeking to utilize the safest system possible What s New in the Second Edition The second edition provides an inclusion of the Z136.8 Research Laser Standard and offers updates and an explanation of eye exposure limits MPE presents new cases studies and presents practical example images It includes coverage of laser lab design lessons addresses user facility challenges and laser disposal Presents case studies of real accidents preventive measures and templates for documenting potential laser risks and attendant safety measures Reviews factors often overlooked when one is setting up a laser lab Demonstrates how to investigate a laser incident This text which includes fundamental laser and laser safety information as well as critical laser use information is appropriate for both the novice and the seasoned professional

Stereo vision-based road condition monitoring Brunken, Hauke,2021-05-12 When planning road construction measures it is essential to have up to date information on road conditions If this information is not to be obtained manually it is currently obtained using laser scanners mounted on mobile mapping vehicles which can measure the 3D road profile However a large number of mobile mapping vehicles would be necessary to record an entire road network on a regular basis Since 2D road damages can be found automatically on monocular camera images the idea was born to use a stereo camera system to capture the 3D profile of roads With stereo camera systems it would be possible to equip a large number of

vehicles and regularly collect data from large road networks In this thesis the potential applications of a stereo camera system for measuring road profiles which is mounted behind the windshield of a vehicle are investigated Since this requires a calibration of the stereo camera system but the effort for the user should be kept low the camera self calibration for this application is also examined 3D reconstruction from stereoscopic images is a well studied topic but its application on road surfaces with little and repetitive textures requires special algorithms For this reason a new stereo method was developed It is based on the plane sweep approach in combination with semi global matching It was tested with different measures for pixel comparison Furthermore the plane sweep approach was implemented in a neural network that solves the stereo correspondence problem in a single step It uses the stereoscopic images as input and provides an elevation image as output A completely new approach was developed for the self calibration of mono cameras and stereo camera systems Previous methods search for feature points in several images of the same scene The points are matched between the images and used for the calibration In contrast to these methods the proposed method uses feature maps instead of feature points to compare multiple views of one and the same plane To estimate the unknown parameters the backpropagation algorithm is used together with the gradient descent method The measurements obtained by stereoscopic image processing were compared with those obtained by industrial laser scanners They show that both measurements are very close to each other and that a stereoscopic camera system is in principle suitable for capturing the surface profile of a road Experiments show that the proposed self calibration method is capable of estimating all parameters of a complex camera model including lens distortion with high precision Bei der Planung von Stra enbauma nahmen ist es unabdingbar ber aktuelle Informationen ber den Stra enzustand zu verf gen Sollen diese Informationen nicht manuell gewonnen werden werden derzeit Messfahrzeug mit Laserscannern verwendet welche das 3D Stra enprofil vermessen k nnen F r die regelm ige Erfassung eines gesamten Stra ennetzes w re jedoch eine gro e Anzahl von Messfahrzeugen erforderlich Da 2D Stra ensch den automatisch auf monokularen Kamerabildern gefunden werden k nnen entstand die Idee ein Stereokamerasystem zur Erfassung des 3D Profils zu verwenden Eine gro e Anzahl von Fahrzeugen k nnte damit ausger stet werden und es k nnten regelm ig Daten von gro en Stra ennetzen erfasst werden In dieser Arbeit werden die Einsatzm glichkeiten eines Stereokamerasystems zur Messung von Stra enprofilen untersucht dass sich hinter der Windschutzscheibe eines Fahrzeugs befindet Da hierzu das Stereokamerasystems kalibriert sein muss der Aufwand f r den Anwender aber geringgehalten werden soll wird au erdem die Selbstkalibrierung f r diesen Einsatzzweck untersucht Die 3D Rekonstruktion aus stereoskopischen Bildern ist ein viel untersuchtes Thema aber ihre Anwendung auf Stra enoberfl chen mit wenig und sich wiederholenden Texturen erfordert spezielle Algorithmen Aus diesem Grund wurde ein neues Stereoverfahren entwickelt Es basiert auf dem Plane sweep Ansatz in Kombination mit Semi global Matching Es wurde mit verschiedene Ma en f r den Vergleich von Pixeln getestet Dar ber hinaus wurde der Plane sweep Ansatz in einem neuronalen Netzwerk implementiert das das Stereo Korrespondenzproblem in

in einem einzigen Schritt. Es verwendet die stereoskopischen Bilder als Eingabe und liefert als Ausgabe ein Höhenbild. Für die Selbstkalibrierung von Monokameras und Stereokamerasystemen wurde ein völlig neuer Ansatz entwickelt. Bisherige Methoden suchen nach Merkmalspunkten in mehreren Bildern der gleichen Szene. Die Punkte werden zwischen den Bildern zugeordnet und für die Kalibrierung verwendet. Die vorgeschlagene Methode verwendet anstelle von Merkmalspunkten Feature Maps, um mehrere Ansichten derselben Ebene zu vergleichen. Zur Schätzung der unbekannten Parameter wird der Backpropagation Algorithmus zusammen mit dem Gradientenabstiegsverfahren verwendet. Die durch stereoskopische Bildverarbeitung erhaltenen Messungen wurden mit Messungen von industriellen Laserscannern verglichen. Sie zeigen, dass beide sehr nahe beieinander liegen und dass ein Stereokamerasystem für die Erfassung des Oberflächenprofils einer StraÙe grundsätzlich geeignet ist. Experimente zeigen, dass die neue Selbstkalibrierungsmethode in der Lage ist, alle Parameter eines komplexen Kameramodells einschließlich der Linsenverzerrung mit hoher Präzision abzuschätzen.
