Neural Information Processing: Research and Development Jagath Chandana Rajapakse, Lipo Wang, 2012-12-06 The field of neural information processing has two main objects investigation into the functioning of biological neural networks and use of artificial neural networks to solve real world problems Even before the reincarnation of the field of artificial neural networks in mid nineteen eighties researchers have attempted to explore the engineering of human brain function After the reincarnation we have seen an emergence of a large number of neural network models and their successful applications to solve real world problems This volume presents a collection of recent research and developments in the field of neural information processing The book is organized in three Parts i e 1 architectures 2 learning algorithms and 3 applications Artificial neural networks consist of simple processing elements called neurons which are connected by weights The number of neurons and how they are connected to each other defines the architecture of a particular neural network Part 1 of the book has nine chapters demonstrating some of recent neural network architectures derived either to mimic aspects of human brain function or applied in some real world problems Muresan provides a simple neural network model based on spiking neurons that make use of shunting inhibition which is capable of resisting small scale changes of stimulus Hoshino and Zheng simulate a neural network of the auditory cortex to investigate neural basis for encoding and perception of vowel sounds

optimized systems is a smart strategy for playing the lottery FIVE ADVANTAGES OF NATURALLY OPTIMIZED SYSTEMS
 Harmony with nature They are generated in harmony with nature as they are based on the principles of balance symmetry
 and proportion fundamental principles of the creation known everywhere in the world for thousands of years which ensures
 their durability and high quality Optimum performance They are at a level of absolute performance or at the highest level of
 current performance as the main parameters of their combinatorial structures have optimum values Multi system
