

11. Draw a pedigree that represents Leah married to Aiden, with 2 sons and 1 daughter. Their son, Scott, married April and had Sutton (a boy) and Kendall (a girl). Their daughter, Karen, married Harry and had Eli (a son) and Tariq (a son). Please label the pedigree with the names of the people.

12. When working through a pedigree, the first thing you need to do is figure out which characteristic is dominant – the shaded one or the un-shaded one. Then you need to choose a letter (let's use A) and begin assigning genotypes. Remember that recessive individuals are always homozygous, so assign their genotypes first. Then go back and look at all of the dominant individuals. For some, you will only be able to determine one allele of the genotype, so just write the one capital allele followed by a question mark (A?).

- Which characteristic is dominant?
black
- Which characteristic is recessive?
white
- Determine the genotypes of all individuals. You will have three "A?". Write your Genotypes beneath each individual.

Identify the following pedigree charts as autosomal, X-linked, recessive, and dominant. Please explain your answer.

13. Is the following autosomal or X-linked? Is it dominant or recessive? Please explain.

X-linked recessive

More males affected than females

Offspring show disorder/trait but parents don't

14. Is the following autosomal or X-linked? Is it dominant or recessive? Please explain.

autosomal dominant

50% of males & 50% of females affected

Both parents & offspring show trait

15. Is the following autosomal or X-linked? Is it dominant or recessive? Please explain.

X-linked recessive

See reasons in question #13

16. If a child has an autosomal dominant trait, what can you say about the parents?

IF the child has the disorder than one of the parents must have the disorder.

Vogel and Motulsky's Human Genetics Friedrich Vogel, Arno G. Motulsky, 2013-06-29 The first edition of this book published in 1979 was found useful by many students and was well received by the scientific community Since the book was first written human genetics has undergone dramatic developments mainly due to the introduction of new concepts and techniques from molecular biology Concomitantly basic scientists have become increasingly interested in problems of human genetics More than 700 human genes have been mapped genes of previously unsuspected complexity such as the gene for factor VIII have become known and the structure of noncoding DNA sequences is being analyzed with the aim of understanding gene regulation DNA diagnosis is being rapidly introduced into medical genetics All this as well as the extensive progress in most other fields of human and medical genetics had to be considered in the preparation of this second

edition The book has been extensively revised and rewritten A substantial new section dealing with gene and chromosomal structure at the molecular level has been added The newer knowledge of molecular genetics has been incorporated and the conceptual and practical contribution of DNA methods for example in the hemoglobinopathies and in some other diseases is discussed Many new figures and tables have been added and some illustrative material has been replaced We have read carefully the many friendly and sometimes flattering reviews of the first edition *Human Genetics and Genomics* Bahar Taneri, Esra Asilmaz, Türem Delikurt, Pembe Savas, Seniye Targen, Yagmur Esemeyen, 2020-02-12 Finally meeting the need for a laboratory manual on human genetics this practical guide is the perfect companion title to all major standard textbooks on the subject The authors all have a high level research background and are actively involved in teaching and counseling Based on a standard curriculum in human genetics each chapter equals one practical unit of the course and topics range from basics in human inheritance to genetics in major disease clusters and from bioinformatics and personalized medicine to genetic counseling
