Explore Atoms and Molecules! Janet Slingerland,2017-04-11 Atoms and molecules are the basic building blocks of matter Matter is every physical thing around us in the universe including our own bodies In Explore Atoms and Molecules With 25 Great Projects readers ages 7 to 10 investigate the structure of atoms and learn how atoms fit together to form molecules and materials If everything is made out of atoms and molecules why do people look different from dogs and doorknobs In Explore Atoms and Molecules readers discover that the characteristics of a material are determined by the way the atoms and molecules connect and study how chemical reactions change these connections to create everything we know This book discusses the elements on the periodic table and why they are grouped into families encouraging the exploration of meaningful classification systems States of matter and mixtures and compounds round out the exploration of atoms and molecules This book supports the maker movement with lots of hands on activities that illuminate the concepts of chemistry Readers build 3 D models of molecules and create a periodic table guessing game Fascinating sidebars offer opportunities for readers to connect the text with real world science and cartoon illustrations provide a fun foundation for learning

Regolith Exploration Geochemistry in Tropical and Subtropical Terrains C.R.M. Butt,H. Zeegers,2015-12-04 The use of exploration geochemistry has increased enormously in the last decade The present volume specifically addresses those geochemical exploration practices appropriate for tropical sub tropical and adjacent areas in environments ranging from rainforest to desert Practical recommendations are made for the optimization of sampling and analytical and interpretational procedures for exploration according to the particular nature of tropically weathered terrains The underlying theme is the recognition that regions between 35 N and 35 S in particular have a common history of deep chemical weathering and lateritization during the late Mesozoic and early Tertiary This has had a profound and lasting effect so that the surface geochemical expressions of mineralization throughout these regions have many similar features with local modification due to more recent weathering under changed climates The volume discusses the data derived from numerous research and case studies in terms of exploration and dispersion models based on the weathering and geomorphological history The models permit valid comparisons between equivalent terrains that may be geographically widely separated and situated in quite different climatic environments The basis of the volume is to view geochemical dispersion within the context of a genetic understanding of the evolution of landforms and the regolith i e landscape
