Schipper, 2019-11-05 The book of Proverbs is more than the sum of its parts Even if some individual proverbs and collections could be older the overall composition stems from the late Persian or early Hellenistic period In its present form the book of Proverbs introduces the scribal student to the foundations of sapiential knowledge and its critical reflection By discussing

different worldviews and contrasting concepts on the relationship between God the world and humanity the book of Proverbs paves the way to both the critical wisdom of Job and Ecclesiastes and the masterful combination of Wisdom and Torah in Sirach Scholarly research has long situated the book of Proverbs within ancient Near Eastern literature but declared it to be something alien within the Hebrew Bible In contrast to such a position the present commentary interprets the book of Proverbs against the background of both ancient Near Eastern literature and the literature of the Hebrew Bible One aim of the commentary is to discuss new ancient Near Eastern parallels to the book of Proverbs with a special focus on Egyptian wisdom literature including Demotic texts from the sixth to fourth centuries BCE An equally important aim of this commentary is a detailed exegesis of Proverbs 1-15 as well as an analysis of the overarching strategy of the book of Proverbs as a whole Taking the prologue of the book in Prov 1:1-7 as a hermeneutical key the book of Proverbs turns out to be a masterful composition addressing both the beginner and the advanced sage With its allusions to other biblical texts including the book of Deuteronomy the Psalms and the Prophets the book of Proverbs can be connected to forms of scribal exegesis in Second Temple literature By using the same scribal techniques as other literati of his time the scribal sage responsible for some parts of the book as well as its final compilation seeks to provide deeper insight into the complex world of scribal knowledge and sapiential thought

Rethinking Environmental Justice in Sustainable Cities Heather E. Campbell,Yushim Kim,Adam M. Eckerd,2015-05-15 As the study of environmental policy and justice becomes increasingly significant in today s global climate standard statistical approaches to gathering data have become less helpful at generating new insights and possibilities None of the conventional frameworks easily allow for the empirical modeling of the interactions of all the actors involved or for the emergence of outcomes unintended by the actors The existing frameworks account for the what but not for the why Heather E Campbell Yushim Kim and Adam Eckerd bring an innovative perspective to environmental justice research Their approach adjusts the narrower questions often asked in the study of environmental justice expanding to broader investigations of how and why environmental inequities occur Using agent based modeling ABM they study the interactions and interdependencies among different agents such as firms residents and government institutions Through simulation the authors test underlying assumptions in environmental justice and discover ways to modify existing theories to better explain why environmental injustice occurs Furthermore they use ABM to generate empirically testable hypotheses which they employ to check if their simulated findings are supported in the real world using real data The pioneering research on environmental justice in this
