Covalent Bonding

Section 8.1 The Covalent Bond

In your textbook, read about the nature of covalent bonds.

Use each of the terms below just once to complete the passage.

covalent bond

molecule

sigma bond

exothermic

pi bond

When sharing of electrons occurs, the attachment between atoms that results is called a(n) **(1)** _____. When such an attachment is formed, bond dissociation energy is released, and the process is **(2)** _____. When two or more atoms bond by means of electron sharing, the resulting particle is called a(n) **(3)** _____. If the electrons shared are centered between the two atoms, the attachment is called a(n) **(4)** _____. If the sharing involves the overlap of parallel orbitals, the attachment is called a(n) **(5)** _____.

In your textbook, read about single and multiple bonds and bond strength.

Circle the letter of the choice that best completes the statement or answers the question.

6. In what form do elements such as hydrogen, nitrogen, and oxygen normally occur?
 - a. as single atoms
 - b. as molecules containing two atoms
 - c. as molecules containing three atoms
 - d. as molecules containing four atoms
7. How many electrons are shared in a double covalent bond?
 - a. none
 - b. one
 - c. two
 - d. four
8. Bond length is the distance between
 - a. two molecules of the same substance.
 - b. the electrons in two attached atoms.
 - c. the nuclei of two attached atoms.
 - d. the orbitals of two attached atoms.
9. Which of the following relationships relating to bond length is generally correct?
 - a. the shorter the bond, the stronger the bond
 - b. the shorter the bond, the weaker the bond
 - c. the shorter the bond, the fewer the electrons in it
 - d. the shorter the bond, the lower the bond dissociation energy

Kauffman, 1993-06-10 Stuart Kauffman here presents a brilliant new paradigm for evolutionary biology one that extends the basic concepts of Darwinian evolution to accommodate recent findings and perspectives from the fields of biology physics chemistry and mathematics The book drives to the heart of the exciting debate on the origins of life and maintenance of order in complex biological systems It focuses on the concept of self organization the spontaneous emergence of order that is widely observed throughout nature Kauffman argues that self organization plays an important role in the Darwinian process of natural selection Yet until now no

systematic effort has been made to incorporate the concept of self organization into evolutionary theory The construction requirements which permit complex systems to adapt are poorly understood as is the extent to which selection itself can yield systems able to adapt more successfully This book explores these themes It shows how complex systems contrary to expectations can spontaneously exhibit stunning degrees of order and how this order in turn is essential for understanding the emergence and development of life on Earth Topics include the new biotechnology of applied molecular evolution with its important implications for developing new drugs and vaccines the balance between order and chaos observed in many naturally occurring systems new insights concerning the predictive power of statistical mechanics in biology and other major issues Indeed the approaches investigated here may prove to be the new center around which biological science itself will evolve The work is written for all those interested in the cutting edge of research in the life sciences **Advanced**
