**Security for Web Services and Service-Oriented Architectures** Elisa Bertino, Lorenzo Martino, Federica Paci, Anna Squicciarini, 2009-10-22 Web services technologies are advancing fast and being extensively deployed in many different application environments Web services based on the extensible Markup Language XML the Simple Object Access Protocol SOAP and related standards and deployed in Service Oriented Architectures SOAs are the key to Web based interoperability for applications within and across organizations Furthermore they are making it possible to deploy applications that can be directly used by people and thus making the Web a rich and powerful social interaction medium The term Web 2.0 has been coined to embrace all those new collaborative applications and to indicate a new social approach to generating and distributing Web content characterized by open communication decentralization of authority and freedom to share and reuse For Web services technologies to hold their promise it is crucial that security of services and their interactions with users be assured Confidentiality integrity availability and digital identity management are all required People need to be assured that their interactions with services over the Web are kept confidential and the privacy of their personal information is preserved People need to be sure that information they use for looking up and selecting services is correct and its integrity is assured

People want services to be available when needed They also require interactions to be convenient and personalized in addition to being private Addressing these requirements especially when dealing with open distributed applications is a formidable challenge

Understanding Service-Oriented Architecture Dr. Ashish Seth,Dr. Kirti Seth,2020-01-14 Let s Design On Demand Business Model \_DESCRIPTION Service Oriented Architecture SOA is an architectural approach that can be shared and reused The book proposes a service based architecture approach to design an adaptive business model for small enterprises It presents an ad hoc model which is based on five layered SOA architecture that can integrate all activities comprising Supply Chain Management SCM Customer Relationship Management CRM Technical and Enterprise applications tools and hence it best suits the SME requirements This book covers the challenges that SMEs face to compete with large enterprises It also compares the proposed model with traditional ERP systems and other similar approaches It is found that the SOA model is efficient cost effective and competent with similar existing solutions There is always a need to know the scope and

size of the work involved while developing a service or deriving any application from service based model this book will help in determining the cost and effort for such projects

**KEY FEATURES** Guide to investigate series of processes activities value chain activities required in Small and Medium size Enterprises SME Guide for organizations to identify which SOA infrastructure will be needed to build service based applications for themselves Guide for organizations to test the SOA model in order to meet the changing on demand business requirements and ensure high level of security and governance Guide to handle interoperability between different vendor infrastructures
