Digital Video Surveillance and Security Anthony C. Caputo, 2010-02-23 *Digital Video Surveillance and Security* provides a blueprint for the IP based electronic security system clients need allowing security professionals to protect their client's place of business or home. The author gives detailed plans on the best camera position areas of coverage and hardware and software to select to maximize the effectiveness of newer lower cost networked technologies. Clear step by step descriptions and detailed illustrations describe the integration of such components as the current or new security system door and window sensors or other access controls offering the capability of instantly launching a video of the area under surveillance on a computer or HDTV. Today's digital video surveillance solutions are networked digitally archived offering granular managed accessibility from anywhere any office home PDA or smart phone and providing interoperability and simple scalability. With recent advances in technology DVS is economically attainable for most businesses. Security consultants can use this information to guide their clients in making budget friendly choices of design and equipment and assembling the optimal system for their needs. Systems installers can use this step by step illustrated guide to master this crucial new technology. Vendor neutral comparisons of camera equipment and recording options. Common sense approach. Highly visual presentation. Case studies and descriptions of best practices. Step by step guides. Easy to read diagrams and schematics.

According to the

same study only thirty nine percent of thefts from motor vehicles were reported due to the victims perception that local law enforcement could not or would not do anything related to the crime committed 1 One step to reduce the frequency of automobile crime in Ireland is to begin installing security camera systems in car parks throughout the country A security camera system in a car park would not only enhance the ability of local law enforcement authorities to apprehend car thieves but also deter the motivation of thieves to attempt the crime Facing similar automobile crimes in their car parks the Enterprise Research Centre ERC at the University of Limerick UL desired a wireless security camera system The system was designed to avoid the high installation cost of a wired security camera system while at the same time not inheriting the limitations of some wireless security camera systems on the market today These limitations included insufficient battery life surveillance area restrictions and insufficient alerts In 2007 two student research teams from Worcester Polytechnic Institute WPI helped the ERC to design a proof of concept wireless security camera system One team focused on the development of an energy efficient camera system that included a PIR sensor camera and memory The other team focused on the design described in this document a mesh network subsystem including TX RX hardware to transmit images through the system to a PC At the core of our proof of concept design was the ZigBee wireless protocol which is designed for use in low cost low power mesh networks The EM260 Radio Control Module RCM designed by Ember Corporation was selected to utilize the ZigBee protocol The module offers a complete wireless solution for designing low power ZigBee applications The EM260 RCM was combined with the MSP430F1611 microcontroller using the Serial Peripheral Interface SPI to create a fully functional camera node and base station Figure 1 illustrates the general system architecture of the camera node The base station architecture is the same except it did not contain the camera PIR sensor or memory and was connected to a PC Figure 1 Camera node At the conclusion of the project the teams were able to provide the Enterprise Research Centre with a proof of concept wireless security camera system The final proof of concept system consisted of two camera nodes and a base station that together formed a functional wireless mesh network Each node has a battery life of up to one year and has a transmission range of up to 90 meters The system supports many nodes and has the ability to add or remove nodes from the network providing the system the capability of covering variable surveillance areas All of the documentation on the wireless security camera system has been left with the ERC for future development The teams are hopeful that research continues on this system and it is able to come to the market in the near future to aid in the reduction of car park crime not only in Ireland but throughout the world **Kasa Smart 2K QHD Security Camera Outdoor Wired Manual Guide** Mila
