Sedimentary Organic Matter R. Tyson, 2012-12-06 A sound understanding of the global carbon cycle requires an appreciation of the various physico chemical and biological processes that determine the production distribution deposition and diagenesis of organic matter in the natural environment This book is a comprehensive interdisciplinary synthesis of this information coupled with an organic facies approach based on data from both microscopy and bulk organic geochemistry

Organic Matter Jean K. Whelan, John W. Farrington, 1992-12-10 Sediments from the world's ocean floors and other water body basins hold a wealth of information about organic life as we know it Organic Matter Productivity Accumulation and Preservation in Recent and Ancient Sediments addresses focusing on the production accumulation and preservation of organic matter in marine and lacustrine sediments Contributors to this important monograph cover a range of geologic ages from recent times back to the Permian Era as well as temperature and organic matter types This resource book will be of interest and benefit to petroleum explorationists and researchers as well as oceanographers marine and environmental scientists sedimentologists geochemists and paleontologists *Sedimentary Organic Matter* Richard V. The Deposition of Organic-carbon-rich Sediments Nicholas Bennett Harris, 2005 Depositional models for organic carbon rich sediments have been the subjects of both great interest and great controversy for many years These sediments serve as the ultimate source of virtually all oil and gas They also represent the interface between biological and geological processes and provide critical evidence for the state of the atmosphere and oceans Yet despite their importance and decades of research the origin of these sediments remains the source of vigorous disagreement The twelve papers in this volume represent the cutting edge of research in this topic They explore the origin of organic carbon rich sediments through a variety of techniques including sedimentology geochemistry paleontology and computer modeling All papers take multidisciplinary approaches to the topic and together they demonstrate the complex interconnected processes that trigger the deposition of organic carbon This book will appeal to geoscientists in many disciplines including explorers for petroleum who need models for source rock deposition organic and inorganic geochemists who study processes in water and sediment sedimentologists who interpret ancient deposition environments and climatologists and oceanographers who reconstruct the behavior of the ancient atmosphere and oceans

Posidonia shale a summary of organic matter maturation and related petroleum generation and a chapter on the use of maturation parameters as calibration tools for numerical modelling of temperature histories of sedimentary basins Also microscopic effects of petroleum generation and oil to gas cracking are treated The final chapters deal with coals as source rocks for oil and gas and with the effects of weathering on sediments which are rich in organic matter Geochemistry of Organic Matter in Sediments and Sedimentary Rocks L. Chemistry of Marine Water and Sediments Antonio Gianguzza, Ezio Pelizzetti, Silvio Sammartano, 2013-06-29 The most important processes on the Earth's surface occur in the Ocean where materials and energy are primarily exchanged In the case of marine chemistry different fields of chemistry from organic to inorganic as well as thermodynamics and biochemistry are involved Analytical Chemistry is a very important tool for the quantification of biogeochemical processes by providing correct and even more sophisticated methodologies These are often directly applied in situ in order to detect trace and ultra trace natural and anthropogenic substances Kinetic and thermodynamic studies allow us to establish whether the process occurs Once discovered it is then possible to build up general models for environmental systems This book gathers many aspects with the aim of creating a general picture of the chemical processes occurring in the marine environment
