

Scinfeld and Pandis developed a chart (see below) to calculate the settling velocity for all particles (mostly larger particles though). The relationship is plotted in Re vs. $C_D Re^2$, where $C_D Re^2$ is developed from

$$V_{ts} = \left(\frac{4g\rho_p C_c D_p}{3C_D \rho} \right)^{1/2} \quad \text{and} \quad Re = \frac{\rho U D_p}{\mu}$$

a) (10 points) Derive the relationship $C_D Re^2 = \frac{4\rho\rho_p g D_p^2 C_c}{3\mu^2}$ using the above two equations.

b) (10 points) Determine the settling velocity in the air for a 200 μm diameter particle with density of 3.5 g/cm^3 using the chart below. Take $C_c = 1.0$ for such a large particle. $\rho_{air} = 0.00130 \text{ g/cm}^3$ and $\mu_{air} = 0.000172 \text{ g/cm}\cdot\text{s}$. (Use another sheet of paper if you need it.)

$$C_D Re^2 = \frac{4\rho\rho_p g D_p^2 C_c}{3\mu^2} \quad \text{and} \quad Re = \frac{\rho U D_p}{\mu}$$

Seinfeld Pandis Solution:

The Atmospheric Environment Michael B. McElroy, 2021-08-10 This comprehensive introduction to the physics and chemistry of Earth's atmosphere explains the science behind some of the most critical and intensely debated environmental controversies of our day. In it, one of the world's leading experts on planetary environments presents the background necessary to assess the complex effects of human activity on our atmosphere and climate. Unique in its breadth and depth of coverage, *The Atmospheric Environment* includes a survey of Earth's climatic history to provide a context for assessing the changes underway today. It is written for and will be of lasting value to a varied audience including not only students but also professional scientists and others seeking a sophisticated but readable introduction to the frontiers of contemporary research on biogeochemistry, depletion of stratospheric ozone, tropospheric air pollution, and climatology. The book covers both the chemistry and physics of the atmosphere with an account of relevant aspects of ocean science, treats atmospheric science and the climate as an integrated whole, and makes explicit the policy implications of what is known. Its critical account of steps taken by the international community to address the issue of climatic change highlights the challenge of dealing with a global issue for which the political and economic stakes are high, where uncertainties are common, and where there is an urgent need for clear thinking and informed policy. The book also sketches key gaps in our knowledge, outlining where we need to go to fully understand the impact of our actions on the climate. Thorough, timely, and authoritative, this is the book to consult for answers about some of the thorniest and most pressing environmental questions that we face.

Atmospheric Chemistry and Physics John H. Seinfeld, Spyros N. Pandis, 2016-03-29 Expanded and updated with new findings and new features. New chapter on Global Climate providing a self-contained treatment of climate forcing, feedbacks, and climate sensitivity. New chapter on Atmospheric Organic Aerosols and new treatment of the statistical method of Positive Matrix Factorization. Updated treatments of physical meteorology, atmospheric nucleation, aerosol-cloud relationships, chemistry of biogenic hydrocarbons. Each topic developed from the fundamental science to the point of application to real-world problems. New problems at an introductory level to aid in classroom teaching.

[Land-Use and Land-Cover Changes](#) Nicole Mölders, 2011-09-15 Wildfires, changing glaciers, deforestation, open-pit mining, increasing demands for food and bio-fuel production, and the growth of megacities change our landscape. The book comprehensively reviews the current knowledge on how natural and anthropogenic land use cover changes affect weather, air quality, and climate worldwide and explains how these changes may trigger further land use cover changes. It discusses how anthropogenic land use cover changes have affected local and regional climate and air quality since the settlement of America and the industrialisation. It addresses the topic of long-range transport of pollutants and dust of devastated areas as well as teleconnections that may cause changes far away from the areas where the land use cover changes occurred, for which land use cover change may become

an international issue similar to CO₂ It also discusses relations to global change and future societal and scientific challenges related to land use cover changes
