New Century Mathematics Workbook 2b Answer:

The New Encyclopaedia Britannica, 1998 **The New Encyclopaedia Britannica: Micropaedia**, 1995 **History of Mathematics** Craig Smorynski, 2007-12-03

1 An Initial Assignment I haven't taught the history of mathematics that often but I do rather like the course. The chief drawbacks to teaching it are that i) it is a lot more work than teaching a regular mathematics course and ii) in American colleges at least the students taking the course are not mathematics majors but education majors and in the past I had found education majors to be somewhat weak and unmotivated. The last time I taught the course however the majority of the students were graduate education students working toward their master's degrees. I decided to challenge them right from the start.

1 Assignment In An Outline of Set Theory James Henle wrote about mathematics. Every now and then it must pause to organize and reflect on what it is and where it comes from. This happened in the sixth century B.C. when Euclid thought he had derived most of the mathematical results known at the time from five postulates. Do a little research to find as many errors as possible in the second sentence and write a short essay on them. The responses far exceeded my expectations. To be sure some of the undergraduates found the assignment unclear. I did not say how many errors they were supposed to find. But many of the students put their hearts and souls into it. My apology to Prof Henle at whose expense I previously had a little fun on this matter. I used it again not because of any animosity I hold for him but because I was familiar with it and dealing with Euclid it seemed appropriate for the start of my course.

[The History of the Geometry Curriculum in the United States](#) Nathalie

Sinclair,2008-02-01 This volume investigates the evolution of the geometry curriculum in the United States over the past 150 years A primary goal is to increase awareness of the shape and nature of the current geometry curriculum by explaining how things have come to be as they are Given the limited access to first hand accounts of the enacted geometry curriculum during the past 150 years the monograph relies on textbooks to provide a record of the implemented curriculum at any given point in time Policy documents can provide insight into the choices made in textbooks by hinting at the issues considered and the recommendations made The monograph is organized in a chronological sequence of notable events leading to discernable changes in thinking about the geometry curriculum over the past century and a half roughly the extent of time during which geometry has been taught in American schools Notable events include important reports or commissions influential texts new schools of thought and developments in learning technologies These events affected among other things content and aims of the geometry curriculum the nature of mathematical activity as construed by both mathematicians and mathematics educators and the resources students are given for engaging in mathematical activity Before embarking through the notable events it is necessary to consider the big bang of geometry namely the moment in time that shaped the future life of the geometry curriculum This corresponds to the emergence of Euclidean geometry Given its influence on the shape of the geometry curriculum familiarity with the nature of the geometry articulated in Euclid s Elements is essential to understanding the many tensions that surround the school geometry curriculum Several themes emerge over the course of the monograph and include the aims and means of the geometry curriculum the importance of proof in geometry the role of visualization and tactile experiences the fusion between solid and plane geometry the curricular connections between geometry and algebra and the use of motion and continuity The intended audience would include curriculum developers researchers teachers and curriculum supervisors A Transition to Advanced Mathematics William Johnston,Alex
