## Spectrometer Features

## Performance Verification (PV)

We recommend that the Performance Verification test is run once a month. To run the test, click the Green Shield in the OMNIC main window, select **Performance Verification**, and then click **Run**.

Performance Verification checks the system, performs an alignment and checks the laser calibration. This test does not need a sample or any accessories installed.

The Systems Status icon indicates the current state of the system and the results of any performance tests:

**Green Shield** indicates that all subsystems are operating within specification and all performance tests passed.

**Yellow Shield** indicates that the system identified a minor problem, which should be viewed to determine the possible effects on the quality of the data collected.

**Red Shield** warns that the system is out of specification or a sub-system failed. It can also indicate that the last performance test did not meet specifications.

## **Nicolet Ir Spectrometer User Guide:**

*Fundamentals of Infrared and Visible Detector Operation and Testing* John David Vincent, Steve Hodges, John Vampola, Mark Stegall, Greg Pierce, 2015-10-26 Presents a comprehensive introduction to the selection operation and testing of infrared devices including a description of modern detector assemblies and their operation. This book discusses how to use and test infrared and visible detectors. The book provides a convenient reference for those entering the field of IR detector design test or use those who work in the peripheral areas and those who teach and train others in the field. Chapter 1 contains introductory material. Radiometry is covered in Chapter 2. The author examines Thermal detectors in Chapter 3, the Classical photon detectors simple photoconductors and photovoltaics in Chapter 4 and Modern Photon Detectors in Chapter 5. Chapters 6 through 8 consider respectively individual elements and small arrays of elements, the readouts ROICs used with large imaging arrays and Electronics for FPA Operation and Testing. The Test Set and The Testing Process are analyzed in Chapters 9 and 10 with emphasis on uncertainty and trouble shooting. Chapters 11 through 15 discuss related skills such as Uncertainty, Cryogenics, Vacuum Optics and the use of Fourier Transforms in the detector business. Some highlights of this new edition are that it Discusses radiometric nomenclature and calculations, detector mechanisms, the associated electronics, how these devices are tested and real life effects and problems. Examines new tools in Infrared detector operations specifically selection and use of ROICs, electronics for FPA operation, operation of single element and very small FPAs, microbolometers and multi color FPAs. Contains five chapters with frequently sought after information on related subjects such as uncertainty, optics, cryogenics, vacuum and the use of Fourier mathematics for detector analyses. *ENVI User's Guide*, 2003    [Spectroscopic Methods in Food Analysis](#) Adriana S. Franca, Leo M.L. Nollet, 2017-12-14 Given the inherent complexity of food products most instrumental techniques employed for quality and authenticity evaluation e.g. chromatographic methods are time demanding, expensive and involve a considerable amount of manual labor. Therefore there has been an increasing interest in simpler, faster and reliable analytical methods for assessing food quality attributes. Spectroscopic Methods in Food Analysis presents the basic concepts of spectroscopic methods together with a discussion on the most important applications in food analysis. The determination of product quality and authenticity and the detection of adulteration are major issues in the food industry causing concern among consumers and special attention among food manufacturers. As such this book explains why spectroscopic methods have been extensively employed to the analysis of food products as they often require minimal or no sample preparation, provide rapid and on line analysis and have the potential to run multiple tests on a single sample i.e. non destructive. This book consists of concepts related to food quality and authenticity that are quite broad given the different demands of the manufacturer, the consumer, the surveillance and the legislative bodies that ultimately provide healthy and
