Nickel Metal Hydride (NiMH) Batteries

Observe the following guidelines when using Nikon EN-ELH1 and EN-ELH2 Nikon batteries.

- Observe rechargeable battery safety charges. At all times, avoid shorting charges in the EN-ELH1 or EN-ELH2 battery charger battery slot.

⚠ Battery may become hot when charged. Observe this warning after handling batteries during or after charging. Batteries may become hot due to heating due to other performance factors after charging under some conditions. This is normal and does not indicate a problem.

- New batteries and batteries that have been left unused for an extended period tend to lose their charge rapidly. This is normal for NiMH batteries and the batteries will reach a charge after being used and recharged several times.

Batteries will benefit from recharging to reach a higher state of charge.

- The battery and charger terminals are covered thoroughly with a protective film. Before charging, remove the protective film and other debris from the charger to ensure proper battery performance.
- They are charged at an ambient temperature of 10–30°C (50–86°F).
- They are fully recharged until fully extended (just until the orange light turns green) and then charged to the full and recharged before recharging.
