The Age of Radiance Craig Nelson,2014-03-25 Radiation is a complex and paradoxical concept staggering amounts of energy flow from seemingly inert rock and that energy is both useful and dangerous While nuclear energy affects our everyday lives from nuclear medicine and food irradiation to microwave technology its invisible rays trigger biological damage birth defects and cellular mayhem From the end of the nineteenth century through the use of the atomic bomb in World War II to the twenty first century s confrontation with the dangers of nuclear power Craig Nelson illuminates a pageant of fascinating historical figures Enrico Fermi Marie and Pierre Curie Albert Einstein FDR Robert Oppenheimer and Ronald Reagan among others He reveals many little known details including how Jewish refugees fleeing Hitler transformed America from a country that created light bulbs and telephones into one that split atoms how the most grotesque weapon ever invented could realize Alfred Nobel s lifelong dream of global peace how emergency workers and low level utility employees fought to contain a run amok nuclear reactor while wondering if they would live or die Brilliantly fascinating and remarkably accessible The Age of Radiance traces mankind s complicated and difficult relationship with the dangerous power it discovered and made part of civilization

Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08 Spacecraft Dynamics and Control The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are developed through MATLAB Simulink code

The Market Mind Hypothesis Patrick

Schotanus,2023-10-04 What is economics missing link Recent economic crises have had a devastating impact on society Worryingly they gravely risked a collapse of the financial system These crises also painfully revealed economics blind spots Crucially economics is not an innocent bystander but central to the problem In this pioneering book Patrick Schotanus explains that economics mechanical worldview is the ontological error which leads to flawed thinking and faulty practices The Market Mind Hypothesis MMH thus calls it mechanical economics it not only erroneously views but also dangerously treats the economy as a machine the market as an automaton and its agents as robots Inspired by heterodox economic and leading cognitive thinkers this book offers an alternative paradigm Central to MMH s psychophysical worldview is the fact that consumers investors and other participants are conscious beings and that their minds extension makes consciousness a reality in markets exemplified by market mood Specifically denial of the complex mind matter exchanges as the essence of markets means the extended mind body problem is economics elephant in the room The book argues that if mechanical economics is the answer we have been asking the wrong questions Moreover we will not solve our economic predicaments by doubling down on the assumption of rationality nor by identifying yet another behavioural bias Instead scholars and students of economics and finance as well as finance practitioners need to investigate through cognitive economics the deep links between markets and minds to better understand both With a foreword by investment strategist Russell Napier an intermezzo by neuroscientist and complexity pioneer Scott Kelso and an afterword by 4E cognition philosopher Julian Kiverstein
