Abstract: *Staphylococcus aureus* is a common cause of nosocomial infection. The purpose of this study was to determine the prevalence of *S. aureus* in the nasal cavity of patients in a tertiary care hospital. A total of 100 patients were screened for *S. aureus* colonization of the nasal cavity. The results showed that 60% of the patients were colonized with *S. aureus*. The study also found that the colonization of the nasal cavity was significantly higher in patients who had been in the hospital for more than 48 hours. These findings suggest that the nasal cavity is a reservoir for *S. aureus* and that colonization of the nasal cavity may be a risk factor for nosocomial infection.
