

Moon Note-Taking Guide

Why do we see the same face of the moon?

Because the moon rotates around its axis at the same rate that it orbits Earth, we always see the same side of the moon. This is called synchronous rotation. The moon's rotation period is 27.3 days, and its orbital period is also 27.3 days. This is a result of the fact that the moon was formed from the same material that formed Earth, and it has been tidally locked to Earth since then.
