Neuroethical Concerns is the second volume in the Advances in Neurotechnology series. It specifically addresses the neuroethical legal and social issues arising from the use of neurotechnology in national security and defense agendas and applications. Of particular concern is Advanced Digital Architectures for Model-Driven Adaptive Enterprises Kulkarni, Vinay, Reddy, Sreedhar, Clark, Tony, Barn, Balbir S., 2020-04-03. The five digital forces—mobility and pervasive computing, cloud, big data, artificial intelligence, and robotics and social media—are poised to bring great academic and industrial breakthroughs. All stakeholders want to understand how to best harness these forces to their advantage. While literature exists for understanding each force independently, there is a lack of knowledge on how to utilize all the forces together to realize future enterprises. Advanced Digital Architectures for Model-Driven Adaptive Enterprises is an essential reference source that explores the potential in unifying the five digital forces to achieve increased levels of agility, efficiency, and scale. Featuring coverage on a wide range of topics including socio-technical systems, adaptive architectures, and enterprise modeling, this book is ideally designed for managers, executives, programmers, designers, computer engineers, entrepreneurs, tool builders, digital practitioners, researchers, academicians, and students at the graduate level.

Shared Governance for Sustainable Working Landscapes Timothy M. Gieseke, 2016-08-05. Sustaining our agricultural landscapes is no longer just a technical, scientific, or even political problem; but it has evolved into a socially complex, so-called wicked problem of conflicting social governance and economics. This creates an extreme economic obstacle where the value of ecosystem services remains low and diffuse, and the transactions costs remain high and multiple. Using Uber-like business platform technology and a shared governance model, a symbiotic demand for environmental benefits is created. Enabling multi-sector transactions for environmental benefits, this platform innovation would remedy the tragedy of the commons, the economic nemesis to achieving landscape sustainability. In a nutshell, to sustain our agricultural landscapes, a transdisciplinary approach supported by a shared governance model housed within a multi-sided platform is needed. This book introduces an assessment framework identifying governance actors, styles, and ratios for socio-ecological systems. The assessment uses a new governance compass to identify the types of actors completing which tasks and identifies the styles of governance used to complete the tasks. It is aimed at anyone involved in sustainability science, agricultural policy planning, or integrated landscape design.

Internet Daemons Fenwick McKelvey, 2018-10-30. A complete history and theory of internet daemons brings these little-known but very consequential programs into the spotlight. We're used to talking about how tech giants like Google, Facebook, and Amazon rule the internet, but what about daemons? Ubiquitous programs that have colonized the Net's infrastructure as well as the devices we use to access it, daemons are little-known. Fenwick McKelvey weaves together history, theory, and policy to give a full account of where daemons come from and how they influence our lives, including their role in hot-button issues like network neutrality. Going back to Victorian times and the popular thought experiment Maxwell's Demon, McKelvey charts how daemons evolved from concept to reality, eventually blossoming into the pandemonium of code.

based creatures that today orchestrates our internet Digging into real life examples like sluggish connection speeds Comcast's efforts to control peer to peer networking and Pirate Bay's attempts to elude daemonic control and skirt copyright McKelvey shows how daemons have been central to the internet greatly influencing everyday users Internet Daemons asks important questions about how much control is being handed over to these automated autonomous programs and the consequences for transparency and oversight

Michael Polanyi and His Generation Mary Jo Nye, 2013-07-30 In Michael Polanyi and His Generation Mary Jo Nye investigates the role that Michael Polanyi and several of his contemporaries played in the emergence of the social turn in the philosophy of science This turn involved seeing science as a socially based enterprise that does not rely on empiricism and reason alone but on social communities behavioral norms and personal commitments Nye argues that the roots of the social turn are to be found in the scientific culture and political events of Europe in the 1930s when scientific intellectuals struggled to defend the universal status of scientific knowledge and to justify public support for science in an era of economic catastrophe Stalinism and Fascism and increased demands for applications of science to industry and social welfare At the center of this struggle was Polanyi who Nye contends was one of the first advocates of this new conception of science Nye reconstructs Polanyi s scientific and political milieus in Budapest Berlin and Manchester from the 1910s to the 1950s and explains how he and other natural scientists and social scientists of his generation including J D Bernal Ludwik Fleck Karl Mannheim and Robert K Merton and the next such as Thomas Kuhn forged a politically charged philosophy of science one that newly emphasized the social construction of science
