Automotive Systems and Software Engineering Yanja Dajsuren, Mark van den Brand, 2019-07-17

This book presents the state of the art challenges and future trends in automotive software engineering. The amount of automotive software has grown from just a few lines of code in the 1970s to millions of lines in today's cars. And this trend seems destined to continue in the years to come considering all the innovations in electric, hybrid, autonomous, and connected cars. Yet there are also concerns related to onboard software such as security, robustness, and trust. This book covers all essential aspects of the field. After a general introduction to the topic, it addresses automotive software development, automotive software reuse, E/E architectures and safety, C-ITS and security, and future trends. The specific topics discussed include requirements engineering for embedded software systems, tools and methods used in the automotive industry, software product lines, architectural frameworks, various related ISO standards, functional safety and safety cases, cooperative intelligent transportation systems, autonomous vehicles, and security and privacy issues. The intended audience includes researchers from academia who want to learn what the fundamental challenges are and how they are being tackled in the industry, and practitioners looking for cutting-edge academic findings. Although the book is not written as lecture notes, it can also be used in advanced master's level courses on software and system engineering. The book also includes a number of case studies that can be used for student projects.

Principally organized around the concept of algorithmic decision making, the book considers how different mapping, sensing, and machine learning ML-dependent capabilities are gifted to autonomous vehicles through different kinds of technical work from computer science students annotating visual data in industry-funded research centres to software engineers designing end-to-end ML models at autonomous vehicle start-ups. The book intends to complicate and question typical understandings of autonomous driving by going under the hood, challenging the technological determinism or decisionism that advocates offer of an inevitable fully automated future. Drawing on seven years of research in a range of empirical contexts, the book will appeal to scholars and students in the fields of science and technology studies, media studies, digital sociology, human geography, and mobilities and transport studies. **Environmental Assessment of Lightweight Electric Vehicles** Patricia Egede, 2016-07-25 This monograph addresses the challenge of the environmental assessment of lightweight electric vehicles.
