Boyce, Richard C. DiPrima, Douglas B. Meade, 2021-10-19 Elementary Differential Equations and Boundary Value Problems 12th Edition is written from the viewpoint of the applied mathematician whose interest in differential equations may sometimes be quite

theoretical sometimes intensely practical and often somewhere in between In this revision new author Douglas Meade focuses on developing students conceptual understanding with new concept questions and worksheets for each chapter Meade builds upon Boyce and DiPrima's work to combine a sound and accurate but not abstract exposition of the elementary theory of differential equations with considerable material on methods of solution analysis and approximation that have proved useful in a wide variety of applications The main prerequisite for engaging with the program is a working knowledge of calculus gained from a normal two or three semester course sequence or its equivalent Some familiarity with matrices will also be helpful in the chapters on systems of differential equations

Cognitive Approaches To Automated Instruction

J. Wesley Regian, Valerie J. Shute, Valerie Shute, 2013-05-13 Useful to researchers as well as practitioners looking for guidance on designing automated instruction systems this book provides a snapshot of the state of the art in this research area In so doing it focuses on the two critical problems first diagnosis of the student's current level of understanding or performance and second selection of the appropriate intervention that will transition the student toward expert performance Containing a comprehensive set of principled approaches to automated instruction diagnosis and remediation it is the first volume on the topic to provide specific detailed guidance on how to develop these systems Leading researchers and practitioners represented in this book address the following questions in each chapter What is your approach to cognitive diagnosis for automated instruction What is the theoretical basis of your approach What data support the utility of the approach What is the range of applicability of your approach What knowledge engineering or task analysis methods are required to support your approach Referring to automated instruction as instruction that is delivered on any microprocessor based system the contributors to and editors of this book believe that it is possible for automated instructional systems to be more effective than they currently are Specifically they argue that by using artificial intelligence programming techniques it is possible for automated instructional systems to emulate the desirable properties of human tutors in one on one instruction
