

Environment's problems

We are seeing a large objection for environmental protection on a daily basis now and it has become a widely debated problem in every society. People all over the world are now working tirelessly to make this a reality. So, let's take a step back and understand what exactly is happening that is causing so much concern all over the world. Let's, also understand the major sources and ways to conserve environment and finally let's touch up on what we say eco-business models.

The environment is the source of every life. The natural environment around us in which we breathe, sleep, eat, do work is the need of every living being on this planet. We all are dependent on this environment for food, shelter, water, oxygen etc. But over the years, the balance between nature & living beings is becoming misbalanced due to industrialization and indiscriminate consumerism. Pollutions of every form is spreading in our environment. This pollution is disrupting our climate, way of life and even the eco systems adversely and leading to major irreversible and disastrous changes. For instance, average temperatures have spiked all over the world leading to what we call desertification i.e., land turning into desert due to lack of water content.

Environmentalists, scientists, governments are working all around the world in their own way to tackle these problems in a variety of ways. To understand this first we have to understand what are the problems we are creating actually.

We can divide the factors which is destroying the equilibrium of nature into man made and natural causes. Since natural causes are out of our hand let's focus on human made causes. Human factors leading to destruction of our environments are again two-fold. We are adding more waste and harmful substance to our environment through plastics, wastes, nuclear materials, oil spills, fossil fuels etc., and we are taking away the cleaning mechanisms of nature like plants, microbes and animals which feed on such wastes to fuel our own needs in day to day lives.

What are the imminent dangers: According to the official NASA website, CO₂ emissions are greater than the previous 400,000 years and our planet is already heated up by 0.8 degrees since 1880, with other harmful emissions such as greenhouse gasses released by coal and natural gas and HFCs. Some scientists believe that by the end of the century, the earth may warm up by an incredible 6 degrees, according to Business Insider and NASA. And this is just tip of the iceberg. We can look forward to erratic rains, floods, draughts, desertification etc., which follow the rise in temperatures.

So, can we do nothing about this problem? For decades corporates preached carbon footprint and pushed the responsibility to common man but as we see we have no say in how to stop this. If we
