Guide to MR-Linac Indra J. Das,Filippo Alongi,Poonam Yadav,Bharat B. Mittal,2024-03-20 This book offers a detailed guide to MR Linac a unique and fast growing radiation treatment modality MR linac is new technology that is a fusion of an MRI and a linear accelerator on the same gantry It can change both target volume delineation and tumor visualization in real time using MR cine images and treatment Tumor location changes moment to moment as radiation is delivered but this cannot be visualized in current radiation therapy practices This new and rapidly growing technology can provide adaptive therapy that was not possible before This book presents current knowledge on MR linac technology clinical practices and ultimately patient outcome where dose escalation is not possible due to limiting normal tissue structures in the vicinity of tumor There are two commercial MR linac machines under consideration and both will be covered in detail The book is divided into four sections The first gives a general introduction to MR Linac covering the role of MRI in radiation oncology the clinical necessity of this technology and patient selection The next section details the physics and technology of MR Linac covering image sequence motion management and treatment planning Section three offers the clinical applications of MR Linac and is divided by body area including lung prostate and breast Finally the fourth section looks to the future and what this technology can mean for radiation oncology This is an ideal guide for radiation oncologists medical physicists and relevant trainees Boyle's court and country guide ,1872 From Global to Local Statistical Shape Priors Carsten Last,2017-03-14

This book proposes a new approach to handle the problem of limited training data Common approaches to cope with this problem are to model the shape variability independently across predefined segments or to allow artificial shape variations that cannot be explained through the training data both of which have their drawbacks The approach presented uses a local shape prior in each element of the underlying data domain and couples all local shape priors via smoothness constraints The book provides a sound mathematical foundation in order to embed this new shape prior formulation into the well known variational image segmentation framework The new segmentation approach so obtained allows accurate reconstruction of even complex object classes with only a few training shapes at hand **Rad Tech's Guide to Photon Counting**
