Start feeling better now. "After a week with the goLITE, my wife happily announced that her "summer husband" had returned." "I feel great; more energy, more positive and optimistic, more like the person I am in the summer." We couldn't have said it better. These are real quotes from real people who improved their moods and beat the winter blues using light. And you can too. Light is nature's stimulant. The upbeat feeling you get on a bright sunny day is no accident—it's the result of light triggering our bodies to release "active" hormones, and we feel great. Winter can be a challenge for many because the shorter days and longer nights leave us simply "light-deprived". Without the normal light stimulation, we often feel down, lethargic or sad. Light therapy provides a natural boost that helps you feel better, increases energy and even helps you sleep. Using the right wavelength of light, you can trigger your active hormones naturally, boosting your mood and overcoming those down feelings, whatever the season. Blue light is the key. Researchers have learned that receptors in our eyes convert the blue light from the summer sky into the chemicals our bodies need to be active and energetic. We don't get this light in the winter, and indoor light doesn't replace this color, which is why our mood, energy and sleep patterns suffer. Twice as effective. The goLITE is the newest breakthrough in light therapy that provides just the blue light our bodies need (we call it BLUEWAVE technology). Studies have shown that low-intensity blue light (470 nm, like that from the goLITE) is twice as effective at managing our body clocks compared to other sources of light. As little as 15 Minutes per day. Using light therapy fits easily into your normal daily routine. You can do it while eating breakfast, exercising or getting ready in the morning. [Read more](#)

Philips Go Lite Manual:

Concussion Care Manual David L. Brody, 2019 It is hard to find a medical condition that has as much media attention as concussion. With growing interest in concussion care by the NFL, NHL, NBA, and many other sports organizations, the military, and by regular patients, the number of concussion care providers has rapidly increased. *Concussion Care Manual Second Edition* is the perfect step-by-step concussion management guide for clinicians, coaches, and even parents of athletic children. This pocket-sized volume discusses how to manage a variety of complexities associated with concussions, including proper diagnosis, management strategies, headaches, anxiety, and depression, PTSD, dizziness, fatigue, and changes to mood, balance, personality, and sleep. This book also covers the essential elements on how to set up and run a concussion clinic, focusing on the administrative need to know. A much-needed list of references, scales, and resources are provided at the end of the book for further investigation. New to the Second Edition: EL Fully revised based on the most up-to-date research in the field across disciplines. Evidence-based this new edition summarizes what works and what doesn't from recent clinical trials and real-world concussion care experience. Provides step-by-step guidance on how to provide appropriate active management when treating concussion.

Cognitive and Mental Health Improvement Under- and Post-COVID-19 Chong Chen, Gabriele Nibbio, Yuka Kotozaki, 2025-03-19 An increasing body of research suggests that the COVID-19 pandemic has worsened global mental health and caused more cognitive impairments. Whereas the COVID-19 pandemic is still ongoing in some regions, it is expected to be ending for most regions in the very near future. From a psychological, psychiatric, and public mental health perspective, it is of vital importance to conduct effective and efficient interventions to promote cognitive and mental health, as they not only are essential for us to cope with the ongoing pandemic but also necessary for us to rebuild a better world post-pandemic. Not to say that a healthy cognitive and mental health state is at the core of human wellbeing and deserves its own place. From previous studies and everyday practices, we already know that regular exercise, appropriate sleep, nutritious diet, close social ties, connection with nature, and mindfulness among others help improve cognition and boost mental health. However, the optimal regimen for each specific cognitive and mental health outcome for a specific population, including both those of healthy and clinical, is unclear and remains to be identified. Furthermore, the underlying psychological, physiological, and neurobiological mechanisms through which each activity or intervention improves cognition and promotes mental health are to be clarified. The aim of this Research Topic is to publish a wide range of studies that help address these unsolved issues and advance our understanding of what activities and interventions help improve cognition and promote mental health. Any topics relevant to cognitive functions, academic or work performance, affective wellbeing, and mental health are welcome. Both studies of acute and chronic regular effects are welcome. The subjects can be healthy human volunteers, clinical patients, or animals of different ages and sexes. Article types include but are not limited to original research, brief research reports, clinical trials, reviews, meta-analyses, hypothesis and theory articles.
