Bas van Fraassen's Approach to

Representation and Models in Science Wenceslao J. Gonzalez, 2014-02-19 This book analyzes Bas van Fraassen's characterization of representation and models in science. In this regard, it presents the philosophical coordinates of his approach and pays attention to his structural empiricism as a framework for his views on scientific representations and models. These are developed here through two new contributions made by van Fraassen. In addition, there are analyses of the relation between models and reality in his approach where the complexity of this conception is considered in detail. Furthermore, there is an examination of scientific explanation and epistemic values judgments. This volume includes a wealth of bibliographical information on his philosophy and relevant philosophical issues. Bas van Fraassen is a key figure in contemporary philosophy of science as the prestigious Hempel Award shows. His views on scientific representation offer new ideas on how it should be characterized and his conception of models shows a novelty that goes beyond other empiricists' approaches of recent times. Both aspects, the characterization of scientific representation and the conception of models in science, are part of a deliberate attempt to forge a structural empiricism, an alternative to structural realism based on an elaborated version of empiricism.

Techno-Scientific Practices Federica Russo, 2022-10-03 In scholarly debates as well as in everyday parlance, we tend to pull science and technology apart: science gives us theory and technology applies it. In practice, however, science and technologies are highly intertwined. In *Techno-Scientific Practices: An Informational Approach*, Federica Russo looks at the practice of science and elucidates the role of technologies and instruments in the process of knowledge production. In this exercise, it becomes evident that technologies cannot be analyzed on their own but always in relation to epistemic agents. Thus, *Techno-Scientific Practices* emphasizes the importance of analyzing the process of knowledge production in techno-scientific contexts in which there is a triad of relations to look at: us, the instruments, and the world. The book thus builds bridges between the philosophy of science, philosophy of technology, and science and technology studies in an unprecedented way.
