Phylogenetic Trees and Molecular Evolution David R. Bickel, 2022-09-29 This book serves as a brief introduction to phylogenetic trees and molecular evolution for biologists and biology students. It does so by presenting the main concepts in a variety of ways: first visually, then in a history, next in a dice game, and finally in simple equations. The content is primarily designed to introduce upper-level undergraduate and graduate students of biology to phylogenetic tree reconstruction and the underlying models of molecular evolution. A unique feature also of interest to experienced researchers is the emphasis on simple ways to quantify the uncertainty in the results more fully than is possible with standard methods. *Comparative Animal Physiology* Mr. Rohit Manglik, 2024-04-29 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high-quality study materials and resources. The focus is on the mathematical and computational tools and concepts which form an essential basis of evolutionary studies, indicate their limitations, and give them orientation. Recent years have witnessed rapid progress in the mathematics of evolution and phylogeny, with models and methods becoming more realistic, powerful, and complex. Aimed at graduates and researchers in phylogenetics, mathematicians, computer scientists, and biologists, and including chapters by leading scientists: A. Bergeron, D. Bertrand, D. Bryant, R. Desper, O. Elemento, N. El Mabrouk, N. Galtier, O. Gascuel, M. Hendy, S. Holmes, K. Huber, A. Meade, J. Mixtacki, B. Moret, E. Mossel, V. Moulton, M. Pagel, M. A. Poursat, D. Sankoff, M. Steel, J. Stoye, J. Tang, L. S. Wang, T. Warnow, Z. Yang, this book of contributed chapters explains the basis and covers the recent results in this highly topical area. *Reconstructing the Tree of Life* Trevor R. Hodkinson, John A.N. Parnell, 2006-12-26 To document the world's diversity of species and reconstruct the tree of life, we need to undertake some simple but mountainous tasks. Most importantly, we need to tackle species-rich groups. We need to collect, name, and classify them, and then position them on the tree of life. We need to do this systematically across all groups of organisms, and b. Studies on Life at the Energetic Edge – from Laboratory Experiments to Field-Based Investigations, Volume II Mark Alexander Lever, Bo Barker Jorgensen, Jan Amend, Victoria Orphan, Tori Hoehler, 2024-01-16 In collaboration with Microenergy 2022, The 4th International Workshop on Microbial Life under Extreme Energy Limitation, we are proud to launch Volume II of *Studies on Life at the Energetic Edge: from Laboratory Experiments to Field-Based Investigations*. This workshop focuses on the energy controls on microbial life and the exploration of the biological demand for energy. Genetic adaptations and phenotypic traits that enable microorganisms to tolerate long periods of energy limitation have attracted broad scientific interest in recent years. Laboratory-based cultivation experiments have shown that the potential to survive weeks to months in the absence of energy inputs occurs across a phylogenetically wide range of microbes.

Studies on natural environments have shown that energy limitation is pervasive across most habitats on Earth from highly metabolically active surface habitats to subsurface environments that have been cut off from new energy inputs for thousands of years Yet much remains to be learned about the evolutionary adaptations and life history traits that enable microorganisms to live under low energy conditions Similarly the spectrum of energy sources and metabolisms that enable and support life on Earth and potentially elsewhere in the Universe is far from constrained

Timetrees: Incorporating Fossils and Molecules, 2nd edition Michel Laurin, Gilles Didier, Rachel C. M. Warnock, 2022-09-15 Calibrating phylogenies to time is central to addressing many questions in evolutionary biology and macroevolution The fossil record once provided our only source for establishing a timeline for evolution However the incompleteness of the fossil record and the non uniformity of fossil recovery rate make it challenging to obtain precise estimates of divergence times from fossil evidence alone Molecular dating which combines evidence from the geological and molecular records enables us to generate a much more complete and precise timeline of events The molecular clock can be time calibrated using temporal evidence from fossils and used to estimate divergence times based on the assumption that the rate of sequence evolution will be approximately constant over time and among lineages Methodological challenges to applying this concept in practice have been to relax the assumption of constant evolutionary rates and to model the uncertainty associated with paleontological and geological calibrations To this end available statistical methods have become increasingly complex in order to capture key features of empirical data These are typically applied using Bayesian inference which provides a powerful framework for incorporating multiple sources of uncertainty Although overall more effort has been expended in developing models of molecular sequence evolution critical advances have also included approaches to modeling taxonomic diversification and fossilization In particular recent advances in birth death process models have allowed for continuous sampling along lineages enabling more information from the fossil record to be incorporated into dating analyses in a statistically coherent way In addition available dating methods can now be applied to scenarios in which no molecular data may be available allowing for novel insights into the evolution of entirely extinct clades Other recent innovations enable us to date divergence times among taxa that have no fossil record including the use of gene duplication events or biogeographic evidence Furthermore time calibrated trees are necessary for obtaining phylogenetic estimates of taxonomic diversification and extinction rates which can now be jointly inferred along with lineage divergence times These approaches offer an exciting opportunity to understand the evolution of life in deep time although key challenges remain especially with regards to modeling the processes of genome evolution taxonomic diversification and fossil recovery In this Research Topic we focus on recent advances in methodology outstanding challenges and the application of molecular and paleontological dating methods to empirical case studies across the Tree of Life

Emerging Applications of Algebraic Geometry Mihai Putinar, Seth Sullivant, 2008-12-10 Recent advances in both the theory and implementation of computational algebraic geometry have led to new striking applications to a variety of fields of research The articles in this volume highlight a range of these applications and provide introductory material for topics covered in the IMA workshops on Optimization and Control and Applications in Biology Dynamics and Statistics held during the IMA year on Applications of Algebraic Geometry The articles related to optimization and control focus on burgeoning use of semidefinite programming and moment matrix techniques in computational real algebraic geometry The new direction towards a systematic study of non commutative real algebraic geometry is well represented in the volume Other articles provide an overview of the way computational algebra is useful for analysis of contingency tables reconstruction of phylogenetic trees and in systems biology The contributions collected in this volume are accessible to non experts self contained and informative they quickly move towards cutting edge research in these areas and provide a wealth of open problems for future research

Assumptions Inhibiting Progress in Comparative Biology Brian I. Crother, Lynne R. Parenti, 2016-11-18 This book is a thought provoking assessment of assumptions inhibiting progress in comparative biology The volume is inspired by a list generated years earlier by Donn Rosen one of the most influential innovative and productive comparative biologists of the latter 20th century His list has assumed almost legendary status among comparative evolutionary biologists Surprisingly many of the obstructing assumptions implicated by Rosen remain relevant today Any comparative biologist hoping to avoid such assumptions in their own research will benefit from this introspective volume
