

## Geometry Notes

### 6-3 Conditions for Parallelograms

In Section 6-2, we looked at the definition of a parallelogram and special properties of parallelograms. In this section, we will work backwards. Given a quadrilateral, how do we know whether or not it is a parallelogram? There are several ways to tell.

#### Conditions for Parallelograms

A quadrilateral is a parallelogram if:

- 1) **Both** pairs of opposite sides are **parallel** (remember this is the definition.)
- 2) **Both** pairs of opposite **sides** are **congruent**.
- 3) **Both** pairs of opposite **angles** are **congruent**.
- 4) **One** pair of opposite **sides** is both **parallel AND congruent**.
- 5) An angle is **supplementary** to **both** of its **consecutive angles**.
- 6) **Both diagonals bisect each other**.

**Ex. 1:** Determine if each of the following must be a parallelogram. If so, give the reason.

a)

**Yes, one pair of sides parallel and  $\cong$**

b)

**Yes, one angle is supp. to both consecutive angles**

c)

**No**

d)

**Technically, yes. You can show that the parallel sides are  $\cong$  by ASA.**
