

How to solve Rational Equations?

1. Factor all the denominators.
2. Find the least common denominator (LCD).
3. Multiply each side of the equation by the LCD to cancel out the denominator.
4. Solve the equation.
5. Check solution(s). Reject any solution that makes the denominator = 0.

Example:

$$\frac{1}{x} + \frac{1}{x-8} = \frac{1}{3} \quad \text{LCD} = 3x(x-8)$$

$$\frac{1}{\cancel{x}} \cdot 3\cancel{x}(x-8) + \frac{1}{\cancel{x-8}} \cdot 3x(\cancel{x-8}) = \frac{1}{\cancel{3}} \cdot 3x(x-8)$$

$$3(x-8) + 3x = x(x-8)$$

$$3x - 24 + 3x = x^2 - 8x$$

$$x^2 - 14x + 24 = 0$$

$$(x-12)(x-2) = 0$$

$$x = 12 \text{ or } x = 2$$

Check the solutions.

Bahamian Students' Experiences with Mathematics in American Universities and Colleges Nikki Rochelle Cleare, 2011 This longitudinal qualitative multi case study examines the mathematical experiences of three Bahamian students pursuing science degrees in American universities and its relationship to their previous mathematical experiences in their Bahamian high schools Drawing on cultural psychology and sociocultural theories of learning this study found that the relationship between the academic preparedness of the participants on their experiences with collegiate mathematics is not limited to subject content only The lessons learnt from the implied curriculum also play a role in their experiences with collegiate mathematics Of the three participants two have had to learn develop techniques for studying because they had not been sufficiently challenged in their previous environments to do so Each of the cases also highlights some powerful constructs needed for success in mathematics and at least two emphasize making connections between concepts procedures manipulatives tools and multiple approaches when solving problems This study contributes to an emerging area of research on student persistence in college level mathematics courses as well as to the ongoing discussions in mathematics education regarding the role importance of conceptual understanding and how to promote it The study makes visible some of the ways in which students post secondary experiences with mathematics are shaped by their perception of their mathematical preparation thus providing a basis for discussions of possible curricular change in the Bahamas It also suggests that issues such as confidence and school teacher expectations of students may play a role in the development of conceptual understanding
