Lourenço, Paolo Gardoni, Izuru Takewaki, Eleni Chatzi, Shaofan Li, 2023-09-29 While the word automation may conjure images of robots taking over jobs the reality is much more nuanced In construction for instance automation is less likely to diminish employment opportunities than it is to increase productivity Indeed automation alongside the global need for new and updated infrastructure and better and more affordable housing can help shape the direction of the construction industry The key will be anticipating and preparing for the shift in part by developing new skills in the current and future workforce This book presents all aspects of automation in construction pertaining to the use of information technologies in design engineering construction technologies and maintenance and management of constructed facilities The broad scope encompasses all stages of the construction life cycle from initial planning and design through the construction of the facility its operation and maintenance to the eventual dismantling and recycling of buildings and engineering structures Features Examines Building Information Management systems allowing on site execution of construction more efficient and for project teams to eliminate mistakes and better coordinate the workforce Presents the latest information on the automation of modular construction production in factories including 3 D printing of components such as facades or even load bearing and essential components Complex Steel Structures Terri Meyer Boake, 2020-08-24 Complexity in architecture construction and material manipulation is constantly increasing due to our present ability to design calculate and fabricate an extending range of geometric shapes and systems This volume addresses the design of complexity in the planning fabrication and construction of steel structures based on non orthogonal geometries curved and chaotic geometries poly diagrid systems lattice grid structures and others Topical photographs by the author on a wide range of international projects present innovative methods and techniques providing an excellent understanding of the possibilities and requirements of complex steel structures **Convergence** Randy Deutsch, 2017-05-02 There is today a pronounced and accelerated convergence in architecture This convergence is occurring by doers not thinkers in practice not academia in building design fabrication and construction It is about solution centric individuals engaged in real time problem solving not in abstractions The nature of this convergence where things are converging and what that means for architecture is the subject of this book from the Introduction Those working in architecture and engineering feel pressure to work faster at lower cost while maintaining a high level of innovation and quality At the same time emergent tools and processes make this possible Convergence is about the firms teams and people who thrive in this environment as a result of their ability to creatively combine and innovate It seeks to answer several timely questions What are the tools and work processes that are converging How are individuals and organizations converging their tools and work processes What challenges and benefits are they seeing What is the ultimate endgame of this convergence What skillsets and mindsets would someone need to develop to work effectively in this changing environment What are the implications of convergence on the role of the designer and on design On how we design build fabricate and construct On how we work The book explains how convergence

relates to but ultimately differs from integration consolidation multi tasking automation and other forms of optimization The practice based research builds upon the author s research in BIM and in the collaborative leveraging of data in design and fabrication As an investigation and meditation on the impact of technology on the education and making of design professionals Convergence explains what is happening in the world of design and discusses the implications for the future of education training and practice *Advances in Design Engineering* Francisco Cavas-Martínez,Félix Sanz-Adan,Paz Morer Camo,Ruben Lostado Lorza,Jacinto Santamaría Peña,2020-03-09 This book gathers the papers presented at the XXIX International Congress INGEGRAF The digital transformation in graphic engineering which was held in Logro o Spain on June 20 21 2019 It reports on cutting edge topics in product design and manufacturing such as industrial methods for integrated product and process design innovative design and computer aided design Further topics covered include virtual simulation and reverse engineering additive manufacturing product manufacturing engineering methods in medicine and education representation techniques and design and modeling for nautical engineering and construction aeronautics and aerospace contexts The book is divided into six main sections reflecting the focus and primary themes of the conference The contributions presented here will not only provide researchers engineers and experts in a range of industrial engineering subfields with extensive information to support them in their daily work but will also stimulate new research directions advanced applications of the methods discussed and future interdisciplinary collaborations
