Luo,2022-12-06 **Modeling of Visual Cognition, Body Sense, Motor Control and Their Integrations** Hong Qiao,Li

Hu,2017-04-25 The interdisciplinary studies between neuroscience and information science have greatly promoted the development of these two fields The achievements of these studies can help humans understand the essence of biological systems provide computational platforms for biological experiments and improve the intelligence and performance of the algorithms in information science This research topic is focused on the computational modeling of visual cognition body sense motor control and their integrations Firstly the modeling and simulation of vision and body sense are achieved by 1 understanding neural mechanism underlying sensory perception and cognition and 2 mimicking accordingly the structures and mechanisms of their signal propagation pathways The achievement of this procedure could provide neural findings for better encoding and decoding visual and somatosensory perception of humans and help robots or systems build humanoid

robust vision body sensing and various emotions Secondly the modeling and simulation of the motor system of the primate are achieved by mimicking the coordination of bones muscles and joints and the control mechanisms of the neural system in the brain and spinal cord This procedure could help robots achieve fast robust and accurate manipulations and be used for safe human computer interaction Finally by integrating them more complete and intelligent systems robots could be built to accomplish various tasks self adaptively and automatically

Neurophysiology in Alzheimer's Disease and Dementia Davide Vito Moretti, 2016-09-06 Alzheimer's disease AD and dementia are the most common neurodegenerative disorder Since the number of individuals with AD and dementia is expected to increase considerably in the near future reliable treatment and diagnosis are critical EEG and neurophysiological technique could be used as a cost effective screening tool for early detection and diagnosis in the Mild Cognitive Impairment MCI stage The aim in neurophysiology research is to develop signal processing methods that improve the specificity for diagnosing dementia we wish to discover signal features that not only significantly differ in AD patients but also allow us to reliably separate AD patients and control subjects This approach is valuable for clinical purposes as diagnostic tool for dementia and it also more fundamentally contributes to a better understanding of brain dynamics of MCI patients Finally the development of neurophysiological biomarker could be useful in monitoring pharmacological treatments The main focus of this special issue will be on the most recent developments and ideas in the field of EEG and neurophysiology which will enable us to extract features that improve the specificity for diagnosing AD and dementia

Cognitive deficits in schizophrenia and other neuropsychiatric disorders:

Convergence of preclinical and clinical evidence Ales Stuchlik, Tomiki Sumiyoshi, 2015-10-23 Neuropsychiatric diseases such as schizophrenia Alzheimer's disease and etc represent a serious medical and socioeconomic problems These diseases are often accompanied by impairments of cognitive function e.g. abstract thinking decision making attention and several types of memory Such deficits significantly disrupt quality of life and daily functioning of patients Cognitive deficits in neuropsychiatric diseases are associated with alterations of brain morphology and function and are often resistant to therapeutic interventions In schizophrenia and related disorders cognitive deficits are also defined as endophenotypes i.e. measurable phenotypes linking these diseases with discrete heritable and reproducible traits This points to the importance of elucidating these endophenotypes in translational studies Animal models may not mimic the full spectrum of clinical symptoms but may act as analogies of particular behaviors or other pathological outcomes They are useful to search for the etiology of particular psychiatric illnesses and novel therapeutics Moreover several behavioral tests to measure cognitive performance in rodents and other species have been implemented The primary focus of the present topic is to provide up to date information on cognitive deficits of neuropsychiatric disorders such as schizophrenia This Research Topic also delineates future directions for translational studies aimed at developing novel treatments interventions of cognitive disturbances
