TO THE JOINT TRAUMA SYSTEM JTS The Joint Trauma System JTS is the Department of Defense DoD authority for the military's trauma care system. The vision of the Joint Trauma System is that every Soldier, Sailor, Marine, and Airman injured on the battlefield will have the optimum chance for survival and maximum potential for functional recovery. To achieve this vision, in 2006 the JTS implemented programs for data-driven trauma system development and improvement. In addition to the collection of trauma data, as part of its data collection efforts, the JTS maintains a registry of trauma patients who received care at medical treatment facilities (MTFs). Since 2007, this registry, known as the DoD Trauma Registry (DoDTR), has documented demographic, injury, treatment, and outcomes data for all trauma patients admitted to any DoD MTF, regardless of whether the injury occurred during ongoing military operations and is the largest military trauma data source in the world. Development of the DoDTR began during the early years of the Global War on Terror (GWOT) when the need to systematically improve trauma care for combat-wounded resulted in the impromptu creation of a demonstration registry known then as the Combat Trauma Registry (CTR). The CTR was constructed by the Center for AMEDD Strategic Studies (CASS); trauma-related information was initially abstracted into it from paper medical records received from trauma nurse coordinators (TNCs) at Landstuhl Regional Medical Center (LRMC) in Germany. Shortly after the demonstration program started, the Army Surgeon General approved its transition to an operational mode, leading to the formation of the Joint Theater Trauma System (JTTS) and eventually the Joint Trauma System (JTS).
