Samsonovich,2019-07-16 The book focuses on original approaches intended to support the development of biologically inspired cognitive architectures It bridges together different disciplines from classical artificial intelligence to linguistics from neuro and social sciences to design and creativity among others The chapters based on contributions presented at the Tenth Annual Meeting of the BICA Society held in on August 15 18 2019 in Seattle WA USA discuss emerging methods theories and ideas towards the realization of general purpose humanlike artificial intelligence or fostering a better understanding of the ways the human mind works All in all the book provides engineers mathematicians psychologists computer scientists and other experts with a timely snapshot of recent research and a source of inspiration for future developments in the broadly intended areas of artificial intelligence and biological inspiration **My Robot Gets Me** Carla Diana,2021-03-30 Your relationships with your smart products are about to get a lot more personal Think how commonplace it is now for people to ask Siri for the weather forecast deploy Roomba to clean their homes or summon Alexa to turn on the lights The smart home market will reach well over 100 billion in the next five years on the promise of products that are truly integrated with our cooking cleaning entertainment security and hygiene habits But the reality is these first generation smart products aren t very smart yet We re clearly seeing only the tip of the iceberg in terms of capability and how such products can enhance our lives How do we take it to the next level In a word design and more specifically social design In this fascinating and instructive book leading product design expert Carla Diana describes how new technology is allowing designers to humanize consumer products in delightfully subtle ways Showcasing vivid examples of social design principles such as product presence object expression and interaction intelligence we see how inventive uses of light sound and movement can evoke human responses to even the most mundane products Diana offers clear guidelines and takeaways for conceptualizing building and optimizing products using such methods as bodystorming scenario storyboarding video prototyping behavior charting and more My Robot Gets Me provides keen insights and practical advice to anyone interested or involved in the burgeoning smart marketplace from product designers and developers to managers and venture capitalists *Re-Creating Nature* James T. Bradley,2019-09-24 An exploration of the moral and ethical implications of new biotechnologies Many of the ethical issues raised by new technologies have not been widely examined discussed or indeed settled For example robotics technology challenges the notion of personhood Should a robot capable of making what humans would call ethical decisions be held responsible for those decisions and the resultant actions Should

society reward and punish robots in the same way that it does humans Likewise issues of safety environmental concerns and distributive justice arise with the increasing acceptance of genetically modified organisms GMOs in food production nanotechnology in engineering and medicine and human gene therapy and enhancement The problem of dual use when a technology can be used both to benefit and to harm exists with virtually all new technologies but is central in the context of emerging 21st century technologies ranging from artificial intelligence and robotics to human gene editing and brain computer interfacing In *Re Creating Nature Science Technology and Human Values in the Twenty First Century* James T Bradley addresses emerging biotechnologies with prodigious potential to benefit humankind but that are also fraught with ethical consequences Some actually possess the power to directly alter the evolution of life on earth including human Specifically these topics include stem cells synthetic biology GMOs in agriculture nanotechnology bioterrorism CRISPR gene editing technology three parent babies robotics and roboethics artificial intelligence and human brain research and neurotechnologies Offering clear explanations of these various technologies a pragmatic presentation of the conundrums involved and questions that illuminate hypothetical situations Bradley guides discussions of these and other thorny issues resulting from the development of new biotechnologies He also highlights the responsibilities of scientists to conduct research in an ethical manner and the responsibilities of nonscientists to become science literate in the twenty first century

More Than Machines? Laura Voss, 2021-02-26 We know that robots are just machines Why then do we often talk about them as if they were alive Laura Voss explores this fascinating phenomenon providing a rich insight into practices of animacy and inanimacy attribution to robot technology from science fiction to robotics R D from science communication to media discourse and from the theoretical perspectives of STS to the cognitive sciences Taking an interdisciplinary perspective and backed by a wealth of empirical material Voss shows how scientists engineers journalists and everyone else can face the challenge of robot technology appearing a little bit alive with a reflexive and yet pragmatic stance *Collaborative Assistive Robot for Mobility Enhancement (CARMEN)* Cristina Urdiales, 2012-02-16 In nowadays aging society many people require mobility assistance Sometimes assistive devices need a certain degree of autonomy when users disabilities difficult manual control However clinicians report that excessive assistance may lead to loss of residual skills and frustration Shared control focuses on deciding when users need help and providing it Collaborative control aims at giving just the right amount of help in a transparent seamless way This book presents the collaborative control paradigm User performance may be indicative of physical cognitive condition so it is used to decide how much help is needed Besides collaborative control integrates machine and user commands so that people contribute to self motion at all times Collaborative control was extensively tested for 3 years using a robotized wheelchair at a rehabilitation hospital in Rome with volunteer inpatients presenting different disabilities ranging from mild to severe We also present a taxonomy of common metrics for wheelchair navigation and tests are evaluated accordingly Obtained results are coherent both from a quantitative and qualitative point of view
