

HT1000/ 1100 Anamorphic Lens (HT169-LENS)

How it works

v1.3

Without an anamorphic lens

The 4:3 panel is not entirely used when displaying 16:9 sources.

Adding an anamorphic lens

Select "Anamorphic" in the "Screen" menu to stretch the image vertically and fill the entire 4:3 panel with 16:9 sources. This utilizes full panel brightness and resolution.

The end result at the 16:9 screen is that the pixels and spaces between the pixels have been reduced in size vertically by 25%. The full XGA panel is being used inside the projector utilizing the full 1024x768 pixels and full panel brightness. The pixel structure at the screen is now rectangular and smaller vertically by 25%. This is achieved optically by the anamorphic lens and gives the overall image at the screen 33% higher resolution and 20% higher brightness without sacrificing anything in the original aspect ratio of the source.

The Anamorphic Lens (NEC part number HT169-LENS) attaches to the standard lens and does not change the throw distance of the projector. There is a small amount of vertical shift of the image, please refer to the installation guide for more information.
