Numerical Electromagnetic Code (NEC)-Basic Scattering Code. Part I. User's Manual R. J.

Marhefka, W. D. Burnside, OHIO STATE UNIV COLUMBUS ELECTROSCIENCE LAB., 1979 The Numerical Electromagnetic Code Basic Scattering Code is a user oriented computed code for the analysis of the far field patterns of antennas in the presence of perfectly conducting metal structures at UHF and above The analysis is based on uniform asymptotic techniques formulated in terms of the Geometrical Theory of Diffraction GTD Complicated structures can be simulated by arbitrarily oriented flat plates an infinite ground plane and a finite elliptic cylinder A wide range of practical problems can be simulated using these shapes For example flat plates can be used to model the superstructure of a ship the body of a truck or the wings and stores of an aircraft The finite elliptic cylinder can be used to model a mast or smoke stack of a ship or the fuselage and engines of an aircraft This document is designed to give an overall view of the operation of the computer code to instruct a user in how to model structures and to show the validity of the code by comparing various computed results against measured data whenever available It also describes in detail the input and output data for the code This information should be sufficient for most users to learn how to effectively operate the code Author *Interactive Graphics Utility for Army NEC (Numerical Electromagnetics Code) Automation (IGUANA). User's Guide* J. Strauch, S. Thompson, SYSTEM DEVELOPMENT CORP SAN DIEGO CA., 1985 The Interactive Graphics Utility for Army NEC Automation IGUANA is a system designed to reduce the time required for antenna model evaluation by providing partial automation to both the data entry and the data display processes Previous to this system the use of existing Numerical Electromagnetics Code NEC for antenna evaluation required a lengthy tedious and error prone process involving manual measurement of three dimensional coordinates of each significant point of the desired input structure from scale drawings generally only Top and Side Views are available and manual entry via keyboards The input structures are in the form of wire models The NEC code requires that each wire be entered individually with both end points radius and segmentation Complex models often required several weeks of effort to correct measurement and keyboard errors IGUANA is provided as an aid to NEC input preparation and output display it performs no antenna evaluations itself This User's Guide has been prepared to explain the capabilities functions and operation of IGUANA
