Describing Species Judith E. Winston, 1999-11-04 New species are discovered every day and cataloguing all of them has grown into a nearly insurmountable task worldwide Now this definitive reference manual acts as a style guide for writing and filing species descriptions New collecting techniques and new technology have led to a dramatic increase in the number of species that are discovered Explorations of unstudied regions and new habitats for almost any group of organisms can result in a large number of new species discoveries and hence the need to be described Yet there is no one source a student or researcher can readily consult to learn the basic practical aspects of taxonomic procedures Species description can present a variety of difficulties Problems arise when new species are not given names because their discoverers do not know how to write a formal species description or when these species are poorly described Biologists may also have to deal with nomenclatural problems created by previous workers or resulting from new information generated by their own research This practical resource for scientists and students contains instructions and examples showing how to describe newly discovered species in both the animal and plant kingdoms With special chapters on publishing taxonomic papers and on ecology in species description as well as sections covering subspecies genus level and higher taxa descriptions Describing Species enhances any writer's taxonomic projects reports checklists floras faunal surveys revisions monographs or guides The volume is based on current versions of the International Codes of Zoological and Botanical Nomenclature and recognizes that systematics is a global and multicultural exercise Though Describing Species has been written for an English speaking audience it is useful anywhere Taxonomy is spoken and will be a valuable tool for professionals and students in zoology botany ecology paleontology and other fields of biology

Color Charts Anne Varichon, 2024-02-06 A beautifully illustrated history of the many inventive, poetic and alluring ways in which color swatches have been selected and staged. The need to categorize and communicate color has mobilized practitioners and scholars for centuries. *Color Charts* describes the many different methods and ingenious devices developed since the fifteenth century by doctors, naturalists, dyers and painters to catalog fragments of colors. With the advent of industrial society, manufacturers and merchants developed some of the most beautiful and varied tools ever designed to present all the available colors. Thanks to them, society has discovered the abundance of color embodied in a plethora of materials: cuts of fabric, leather, paper and rubber, slats of wood and linoleum, delicate skeins of silk, careful deposits of paint and pastels, fragments of lipstick and arrangements of flower petals. These samples shape a visual culture and a chromatic vocabulary and instill a deep desire for color. Anne Varichon traces the emergence of modern color charts from a set of processes developed over the centuries in various contexts. She presents illuminating examples that bring this remarkable story to life from ancient writings revealing attention to precise shade to contemporary designers' color charts, dyers' notebooks and Werner's famous color nomenclature. Varichon argues that color charts have linked generations of artists, artisans, scientists, industrialists and merchants and have played an essential and enduring role in the way societies think about color. Drawing on nearly two hundred documents from public and private collections, almost all of them previously unpublished, this wonderfully illustrated book shows how the color chart in its many distinct forms and expressions is a practical tool that has transcended its original purpose to become an educational aid and subject of contemplation worthy of being studied and admired.
