**Planning templates**      **Superminds** Thomas W. Malone, 2018-05-15  
 From the founding director of the MIT Center for Collective Intelligence comes a fascinating look at the remarkable capacity for intelligence exhibited by groups of people and computers working together  
 If you're like most people you probably believe that humans are the most intelligent animals on our planet  
 But there's another kind of entity that can be far smarter: groups of people  
 In this groundbreaking book Thomas Malone the founding director of the MIT Center for Collective Intelligence shows how groups of people working together in superminds like hierarchies markets democracies and communities have been responsible for almost all human achievements in business government science and beyond  
 And these collectively intelligent human groups are about to get much smarter  
 Using dozens of striking examples and case studies Malone shows how computers can help create more intelligent superminds simply by connecting humans to one another in a variety of rich new ways  
 And although it will probably happen more gradually than many people expect artificially intelligent computers will amplify the power of these superminds by doing increasingly complex kinds of thinking  
 Together these changes will have far reaching implications for everything from the way we buy groceries and plan business strategies to how we respond to climate change and even for democracy itself  
 By understanding how these collectively intelligent groups work we can learn how to harness their genius to achieve our human goals  
 Drawing on cutting edge science and insights from a remarkable range of disciplines **Superminds** articulates a bold and utterly fascinating picture of the future that will change the ways you work and live both with other people and with computers      **Socioscientific Issues Focused Teacher Education** Bahadır Namdar, Engin Karahan, 2024-03-30
