cDNA Library Protocols Ian G. Cowell, Caroline A. Austin, 2008-02-02 The first libraries of complementary DNA cDNA clones were constructed in the mid to late 1970s using RNA dependent DNA polymerase

reverse transcriptase to convert poly A mRNA into double stranded cDNA suitable for insertion into prokaryotic vectors Since then cDNA technology has become a fundamental tool for the molecular biologist and at the same time some very significant advances have occurred in the methods for constructing and screening cDNA libraries It is not the aim of cDNA Library Protocols to give a comprehensive review of all cDNA library based methodologies instead we present a series of up to date protocols that together should give a good grounding of procedures associated with the construction and use of cDNA libraries In deciding what to include we endeavored to combine up to date versions of some of the most widely used protocols with some very useful newer techniques cDNA Library Protocols should therefore be especially useful to the investigator who is new to the use of cDNA libraries but should also be of value to the more experienced worker Chapters 1-5 concentrate on cDNA library construction and manipulation Chapters 6 and 7 describe means of cloning difficult to obtain ends of cDNAs Chapters 8-18 give various approaches to the screening of cDNA libraries and the remaining chapters present methods of analysis of cDNA clones including details of how to analyze cDNA sequence data and how to make use of the wealth of cDNA data emerging from the human genome project

Honn, Lawrence J. Marnett, Thomas Walden Jr., 2012-12-06 In recent decades eicosanoids have been attracting an increasing amount of attention as a result of their important physiological roles in many areas of biology and medicine The eicosanoids comprise the prostaglandins thromboxanes and leukotrienes and are products of arachidonic acid an essential polyunsaturated fatty acid stored in tissue phospholipids Disturbances of eicosanoids and their metabolic products play a regulatory role in many types of cell injuries and diseases One of the most exciting areas of eicosanoid research pinpoints their participation in the control of cell proliferation and differentiation Eicosanoids form a link between different fields of research into such areas as cancer inflammation and radiation induced injury This link provided the impetus for the development of the conference series of which the present volume represents the proceedings of the Second International Conference held in Berlin in October 1991
