Department of Computer Science,1993 Abstract We consider the solution of a linear system $Ax = b$ on a distributed memory machine when the matrix A has full rank and is large sparse and nonsymmetric We use our Cartesian Nested Dissection algorithm to compute a fill reducing column ordering of the matrix We develop algorithms that use the associated separator tree to estimate the structure of the factor and to distribute and perform numeric computations When the matrix is nonsymmetric but square the numeric computations involve Gaussian elimination with row pivoting when the matrix is overdetermined row oriented Householder transforms are applied to compute the triangular factor of an orthogonal factorization We compare the fill incurred by our approach to that incurred by well known sequential methods and report on the performance of our implementation on the Intel iPSC 860 Popular Mechanics ,1989-08 Popular Mechanics inspires instructs and influences readers to help them master the modern world Whether it s practical DIY home improvement tips gadgets and digital technology information on the newest cars or the latest breakthroughs in science PM is the ultimate guide to our high tech lifestyle *WIND* George S.
