Lunar and Planetary Webcam User's Guide Martin Mobberley, 2006-08-03 In the last few years cheap webcams have revolutionized amateur astronomy by providing a very inexpensive alternative to purpose made astronomical CCD cameras which use refrigerated imaging chips and are thus extremely expensive Webcams are capable of more advanced work than normal digital cameras because their simple construction makes it easy to remove the webcam's lens allowing it to be interfaced directly to a telescope Using a webcam is not difficult but most amateur astronomers who have tried to do this do not achieve the finest results despite the webcam's potential There are numerous imaging and image processing tricks and techniques and all of them are needed to get the best results Along with webcam technology has come simple to use image processing and enhancement using a PC the most powerful technique is stacking in which the best images out of hundreds are selected and summed automatically to provide startlingly good results Lunar and Planetary Webcam User's Guide demystifies the jargon of webcams and computer processing and provides detailed hints and tips for imaging the Sun Moon and planets with a webcam He looks at each observing target separately describing and explaining all specialised techniques in context Glance through the images in this book to see just how much you can easily achieve by using a webcam with your telescope

A User's Guide to the Meade LXD55 and LXD75 Telescopes Martin Peston, 2010-04-28 I have owned telescopes for over 25 years since I was a young lad I purchased an LXD55 AR 6 Refractor in 2002 and was one of the first to own one in the UK I am also a proud owner of an LXD75 SC 8 Armed with these two very different telescopes I have spent many hours searching the skies for interesting objects using Meade's Autostar Goto facility My motivation to write a book about the LXD Goto telescope series first came from comments about an LXD55 AR 6 Refractor review that was published on the LXD55.com website From then on I have had regular emails from people asking technical questions about the telescope and which model is best suited for them Whilst attending Star parties in the UK I found that many LXD owners would struggle to use them even at a basic level especially if they have never owned or used an equatorially mounted Goto telescope before Since the first LXD55 models came out in early 2002 owners have struggled to find useful information to help them use the telescopes to the best advantage There have been mixed reactions about its quality and performance Hence this book is directed towards those who are new to Goto and the LXD telescope

The Hatfield SCT Lunar Atlas Anthony Cook, 2013-10-11 In 2004 it became obvious that Henry Hatfield's original atlas wasn't suitable for all current commercially made amateur telescopes. Newtonian telescopes and astronomical refractors for many years the only choice for amateurs invert the observed image. The standard Hatfield Atlas therefore follows the IAU International Astronomical Union convention of having maps and photographs with South at the top and West on the left, an inverted image. However, the current ranges of Schmidt-Cassegrain and Maksutov telescopes that's most of those manufactured by Meade, Celestron and many others don't invert the observed image but instead reverse it left for right. That's with North at the top and East on the left. Because of the way the human visual system works, it is almost impossible to mentally mirror image a map to compare it with the view through the eyepiece, so even turning an IAU standard atlas upside down doesn't help. This new SCT version of the Atlas solves this problem for observers. Identification of lunar features is made quick and easy. The new digitally re-mastered second edition vastly improves the clarity and definition of the original photographs significantly beyond the resolution limits of the photographic grains present in earlier atlas versions whilst preserving the layout and style of the original publications. This has been achieved by merging computer visualized Earth-based views of the lunar surface derived from NASA's Lunar Reconnaissance Orbiter data with scanned copies of Commander Hatfield's photographic plates using the author's own software. The result is a The Hatfield SCT Lunar Atlas for 21st century amateur telescopes up to and beyond 12 inch aperture. It contains all the features that made the original so widely used: a combination of an index of all International Astronomical Union named primary lunar features and twelve chart areas help to locate any named lunar features of interest that can each be examined under typically five different states of illumination. Close-ups of interesting features are also included. The new Atlas is supplemented by an introduction to its use, a short description of the digital re-mastering technique and a completely new section describing lunar observing techniques. At the end of the atlas there is an index of all named features and crater diameters along with a summary table of the dates

and times that the original Hatfield images represent **Astronomy Now**, 2007 *Moon Observer's Guide* Peter Grego, 2004 A night by night guide to studying the moon The moon is usually the first celestial body that captures a stargazer's attention and imagination Throughout history the moon has endured as a universal subject of myth poems entertainment and intense scientific endeavor In clear language and with full color photographs and illustrations throughout Moon Observer's Guide offers practical guidance to amateur astronomers viewing Earth's only natural satellite There is valuable advice for observing the Moon with the naked eye binoculars and telescopes Central to this book is a detailed 28 day guide to lunar features Lunar geology and the various causes of physical features such as craters and volcanoes are described Also included are Guidelines for choosing binoculars and telescopes Ways of recording observations Digital and conventional photography Using Internet resources personal computers and lunar software programs Safety tips for observing the moon during solar and lunar eclipses Detailed moon maps This book is an ideal reference for the growing numbers of beginning astronomers
