What is Freedom

By the literal meaning, freedom refers to having the right to think, speak or act without getting restrained or hindered. Freedom of action on a philosophical perspective means the ability to be free from hindrances (Largen, 234). These restraints are not only external barriers to our actions but also internally from addictions or physical disabilities. Politically, it refers to having the right to speak, assemble, and the government restrictions on associations, organizations, and groups, for example, the media or religion. Such are examples of external freedom. My goal in this paper is to give a further discussion on the different features that relates to freedom which includes:

Individuality-The freedom to create, develop and showcase the unique personality of an individual's life story both in public and in private.

Protection against manipulation- Captured from the symbolic manipulation where one uses other people as a means of actualizing their needs. It is a standard feature with money matters where one pays others to make their ends meet.

Freedom to make and live in the world-The society is an artifact where we are born not only to reside in but also to change it to our desires. It is a collaborative task to limit the abuse that can result from the actions.

In his article titled The Two Concepts of Liberty, Isaiah Berlin says that 'negative freedom,' is the lack of any constraints either internal or external. There is also another form of liberty he refers to as 'positive freedom' which raises an earlier question about the free will. One can have the freedom to act; that is being free of constraints even if the free will gets determined by the laws of nature.

What is Determinism

Determinism, on the other hand, is a philosophical idea that every occurrence or the state of affairs, which includes every person's action or decision, is an inevitable and necessary outcome of a previous state of affairs (O'Grady, 16). On a stricter note, determinism should be differentiated from pre-determinism which is the notion that the entire history, as well as current and future events, is determined at the origins of the universe.

Also, neither should it be confused with determination (O'Grady, 17), which dictates that the previous events can determine events including the human activities without getting pre-determined back to the time before the individual's birth or during the origins of the universe

What is Consciousness

Consciousness is the natural state when one is awake, and the mind is aware of the surroundings. It comprises of four aspects namely feeling, intuiting, sensing, and thinking (Semir, 121). The four

graduate sectors The chapters provide case studies and concrete examples of what the UDL reflection on practice might look like in specific faculties and departments While highlighting UDL in areas such as educational technology student engagement assignment design and inclusive education this book is ideally intended for inservice and preservice teachers administrators teacher educators higher education professors and leaders practitioners researchers academicians and students interested in the integration of UDL into strategic academic plans *Evaluating Philosophies* Mario Bunge,2012-07-04 The first part deals with philosophies that have had a significant input positive or negative on the search for truth it suggests that scientific and technological are either stimulated or smothered by a philosophical matrix and it outlines two ontological doctrines believed to have nurtured research in modern times systemism not to be mistaken for holism and materialism as an extension of physicalism The second part discusses a few practical problems that are being actively discussed in the literature from climatology and information science to economics and legal philosophy This discussion is informed by the general principles analyzed in the first part of the book Some of the conclusions are that standard economic theory is just as inadequate as Marxism that law and order are weak without justice and that the central equation of normative climatology is a tautology which of course does not put climate change in doubt The third and final part of the book tackles a set of key concepts such as those of indicator energy and existence that have been either taken for granted or neglected For instance it is argued that there is at least one existence predicate and that it is unrelated to the so called existential quantifier that high level hypotheses cannot be put to the test unless conjoined with indicator hypotheses and that induction cannot produce high level hypotheses because empirical data do not contain any transempirical concepts Realism materialism and systemism are thus refined and vindicated *How Philosophers Argue* Fernando Leal,Hubert Marraud,2022-02-21 This volume presents a double argumentative analysis of the debate between Bertrand Russell and Frederick Copleston on the existence of God It includes an introduction justifying the choice of text and describing the historical and philosophical background of the debate It also provides a transcript of the debate based in part on the original recording The argumentative analyses occupy Parts I and II of the book In Part I the argumentative process is analysed by means of the ideal model of critical discussion the workhorse of pragma dialectics Part I shows how the two parties go through the four stages of a critical discussion It highlights the questions raised over and beyond the presiding question of whether God exists and examines almost a hundred questions that are raised Many are left in the air whereas a few others give rise to sundry sub discussions or meta dialogues In Part II the theoretical framework of argument dialectic is put to work argument structures are identified by means of punctuation marks argumentative connectors and operators allowing to see the argumentative exchange as the collaborative construction of a macro argument Such a macro argument is both a joint product of the arguers and a complex structure representing the dialectical relationships between the individual arguments combined in it Finally the complementarity of the two approaches is addressed Thus the book can be described as

an exercise in adversarial collaboration **Research Methodology in the Built Environment** Vian Ahmed,Alex Opoku,Zeeshan Aziz,2016-03-10 Built environment students are not always familiar with the range of different research approaches they could be using for their projects Whether you are undertaking a postgraduate doctoral programme or facing an undergraduate or masters dissertation this book provides general advice as well as 13 detailed case studies from 16 universities in 7 countries to help you get to grips with quantitative and qualitative methods mixed methods of data collection action research and more **Induction, Science, and Morality** Seungbae Park,2025-08-25 This book offers new insights into Hume s problem of induction In addition to that it argues against the coherentist justification of induction refuting Hume s initial problem of induction and develops counter inductions to defend scientific realism from pessimists and advocates a realist theory of scientific development In doing so this book enriches the moral realism debate with the scientific realism debate and is of great value to researchers and advanced students in philosophy of science **The Structured Essay** Sr. Mary Michael Spangler OP,Rita Werner,2002-03-18 *Writing in English: A Guide for Advanced Learners* Dirk Siepmann,John D.
