Photogrammetry of a 5m Inflatable Space Antenna with Consumer Digital Cameras Richard S. Pappa, 2000 This paper discusses photogrammetric measurements of a 5m diameter inflatable space antenna using four Kodak DC290 2 1 megapixel digital cameras The study had two objectives 1 Determine the photogrammetric measurement precision obtained using multiple consumer grade digital cameras and 2 Gain experience with new commercial photogrammetry software packages specifically PhotoModeler Pro from Eos Systems Inc The paper covers the eight steps required using this hardware software combination The baseline data set contained four images of the structure taken from various viewing directions Each image came from a separate camera This approach simulated the situation of using multiple time synchronized cameras which will be required in future tests of vibrating or deploying ultra lightweight space structures With four images the average measurement precision for more than 500 points on the antenna surface was less than 0 020 inches inplane and approximately 0 050 inches out of plane

Accident Reconstruction Donald E. Struble, Ph.D., 2013-09-24 *Automotive Accident Reconstruction Practices and Principles* introduces techniques for gathering information and interpreting evidence and presents computer based tools for analyzing crashes This book provides theory information and data sources techniques of investigation an interpretation of physical evidence and practical tips for beginners It also works as an ongoing reference for experienced reconstructionists The book emphasizes three things the theoretical foundation the presentation of data sources and the computer programs and spread sheets used to apply both theory and collected data in the reconstruction of actual crashes It discusses the specific requirements of reconstructing rollover crashes offers background in structural mechanics and describes how structural mechanics and impact mechanics are applied to automobiles that crash The text explores the treatment of crush energy when vehicles collide with each other and with fixed objects It delves into various classes of crashes and simulation models The framework of the book starts backward in time beginning with the analysis of post crash vehicle motions that occurred without driver control Applies time reverse methods in a detailed and rigorous way to vehicle run out trajectories utilizing the available physical evidence Walks the reader through a collection of digital crash test data from public sources with

detailed instructions on how to process and filter the information Shows the reader how to build spread sheets detailing calculations involving crush energy and vehicle post crash trajectory characteristics Contains a comprehensive treatment of crush energy This text can also serve as a resource for industry professionals particularly with regard to the underlying physics *Automotive Accident Reconstruction* Donald E. Struble, John D. Struble, 2020-01-24 This fully updated edition presents practices and principles applicable for the reconstruction of automobile and commercial truck crashes Like the First Edition it starts at the very beginning with fundamental principles information sources and data gathering and inspection techniques for accident scenes and vehicles It goes on to show how to analyze photographs and crash test data The book presents tire fundamentals and shows how to use them in spreadsheet based reverse trajectory analysis Such methods are also applied to reconstructing rollover crashes Impacts with narrow fixed objects are discussed Impact mechanics structural dynamics and conservation based reconstruction methods are presented The book contains a comprehensive treatment of crush energy and how to develop structural stiffness properties from crash test data Computer simulations are reviewed and discussed Extensively revised this edition contains new material on side pole impacts It has entirely new chapters devoted to low speed impacts downloading electronic data from vehicles deriving structural stiffness in side impacts and incorporating electronic data into accident reconstructions **3D Synthetic Environment Reconstruction** Mahdi
