Shapiro,2005-10-03 Research with human subjects has long been controversial because of the conflicts that often arise between promoting scientific knowledge and protecting the rights and welfare of subjects Twenty five years ago the National Commission for the Protection of Human Subjects of Biomedical and Behavioral Research addressed these conflicts The

result was the Belmont Report Ethical Principles and Guidance for Research Involving Human Subjects a report that identified foundational principles for ethical research with human subjects respect for persons beneficence and justice Since the publication of Belmont these three principles have greatly influenced discussions of research with human subjects While they are often regarded as the single most influential set of guidelines for biomedical research and practice in the United States and other parts of the world not everyone agrees that they provide adequate guidance Belmont Revisited brings together a stellar group of scholars in bioethics to revisit the findings of that original report Their responses constitute a broad overview of the development of the Belmont Report and the extent of its influence especially on governmental commissions as well as an assessment of its virtues and shortcomings Belmont Revisited looks back to reexamine the creation and influence of the Belmont Report and also looks forward to the future of research with a strong call to rethink how institutions and investigators can conduct research more ethically

**Respect in Bioethics** Darlei Dall'Agnol, 2016-09-23 This book discusses the philosophical foundations of bioethics with a particular focus on the tensions and potential dilemmas generated by the intuitionist meta ethical commitments of the predominant normative theory namely the four principles approach This view is based on the prima facie norms of respect for autonomy one ought to respect the autonomous choices of subjects of scientific research patients non maleficence one ought to refrain from inflicting harm beneficence one ought to do good and prevent or remove harm and justice one ought to treat people fairly The tensions in applying these basic principles may lead to inaction in scientific experiments involving human subjects or to arbitrary applications of the norms in the art of caring The problem can be made explicit in these terms on the one hand caring without respecting seems blind degenerating into forms of paternalism when for instance the carer imposes her conception of the good life or a particular procedure on the cared for on the other hand respecting without caring amounts to indifference or individualism when for example a person does not look after a vulnerable being properly The initial hypothesis of this book then is that the concept of respectful care can be built up working from an ethico philosophical perspective to be a leading notion capable of guiding our daily actions and bioethical practices
