

Problems

Use the ASA Theorem or the AAS Theorem to explain why the triangles congruent.

1. Because $\angle ABC$ and $\angle DCB$ are right angles, they are congruent. $\overline{AC} \cong \overline{DC}$ by the Reflexive Property of \cong , and it is given that $\angle B \cong \angle C$. Therefore, $\triangle ABC \cong \triangle DCB$ by the ASA Theorem.

2. It is given that $\overline{AC} \cong \overline{DC}$ and $\angle B \cong \angle C$. Because $\angle ACB$ and $\angle DCB$ are vertical angles, they are congruent. Therefore, $\triangle ABC \cong \triangle DCB$ by the ASA Theorem.

Problems

Explain congruence.

- Copy the ray figure on the right. Mark the figure with the angle congruences and side congruences you need to use to prove the triangles congruent by the ASA Theorem.
- Copy the second figure shown. Mark the figure with the angle congruences and side congruences you need to use to prove the triangles congruent by the ASA Theorem.
- Draw and mark two triangles that are congruent by either the ASA Theorem or the AAS Theorem. (Check students' work.)

What additional information would you need to prove each pair of triangles congruent by the stated postulate or theorem?

4. ASA Theorem:
 $\angle ADE \cong \angle CDE$

5. AAS Theorem:
 $\angle ADE \cong \angle CDE$ and
 $\angle AED \cong \angle CED$

6. ASA Theorem:
 $\angle ADE \cong \angle CDE$

7. AAS Theorem:
 $\angle ADE \cong \angle CDE$

8. AAS Theorem:

grade 6 including six practice tests **Measuring Classroom Practice** John L. Smithson,1994 **A Beginner's Guide to Discrete Mathematics** W.D. Wallis,2013-03-14 This text is a basic introduction to those areas of discrete mathematics used by students of mathematics and computer science Introductory courses on this material are now standard at many colleges and universities Usually these courses are of one semester's duration and usually they are offered at the sophomore level Very often this will be the first course where the students see several real proofs The preparation of the students is very mixed and one cannot assume a strong background In particular the instructor should not assume that the students have seen a linear algebra course or any introduction to number systems that goes beyond college algebra In view of this I have tried to avoid too much sophistication while still retaining rigor I hope I have included enough problems so that the student can reinforce the concepts Most of the problems are quite easy with just a few difficult exercises scattered through the text If the class is weak a small number of sections will be too hard while the instructor who has a strong class will need to include some supplementary material I think this is preferable to a book at a higher mathematical level which will scare away weaker students
