Reversion Of Forest To Tundra In The Central Yukon:

Flora of the Yukon Territory William J. Cody, National Research Council of Canada, 2000 This work covers geology and vegetation of the vascular plants of the Yukon Territory It should be of interest to botanical scientists students and travellers interested in biodiversity and for rare and endangered species wildlife management *Predicting the Effect of Fire on Large-scale Vegetation Patterns in North America* Donald McKenzie, 1996 Ecosystem Collapse and Climate Change Josep G. Canadell, Robert B. Jackson, 2021-06-19 Human driven greenhouse emissions are increasing the velocity of climate change and the frequency and intensity of climate extremes far above historical levels These changes along with other human perturbations are setting the conditions for more rapid and abrupt ecosystem dynamics and collapse This book presents new evidence on the rapid emergence of ecosystem collapse in response to the progression of anthropogenic climate change dynamics that are expected to intensify as the climate continues to warm Discussing implications for biodiversity conservation the chapters provide examples of such dynamics globally covering polar and boreal ecosystems temperate and semi arid ecosystems as well as tropical and temperate coastal ecosystems Given its scope the volume appeals to scientists in the fields of general ecology terrestrial and coastal ecology climate change impacts and biodiversity conservation

Periglacial Geomorphology Athol D. Abrahams, John C. Dixon, 2020-05-10 This book first published in 1992 contains the proceedings of the 22nd Binghamton Geomorphology Symposium and highlights the quantity and diversity of periglacial geomorphic research being undertaken in Arctic and alpine environments The articles explore a variety of geomorphic processes and examine the potential impacts of global change on the nature and extent of permafrost and seasonal ice phenomena **Forest Development in Cold Climates** John Alden, J. Louise Mastrantonio, Søren Ødum, 2013-06-29 As forests decline in temperate and tropical climates highly developed countries and those striving for greater economic and social benefits are beginning to utilize marginal forests of high latitude and mountainous regions for resources to satisfy human needs The benefits of marginal forests range from purely aesthetic to providing resources for producing many goods and services demanded by a growing world population Increased demands for forest resources and amenities and recent warming of high latitude climates have generated interest in reforestation and afforestation of marginal habitats in cold regions Afforestation of treeless landscapes improves the environment for human habitation and provides for land use and economic prosperity Trees are frequently planted in cold climates to rehabilitate denuded sites for the amenity of homes and villages and for wind shelter recreation agroforestry and industrial uses In addition forests in cold climates reduce the albedo of the earth's surface in winter and in summer they are small but significant long lived sinks for atmospheric carbon dioxide Finally growth and reproductive success of forests at their geographic limits are sensitive indices of climatic change As efforts to adapt forests to cold climates increase however new afforestation problems arise and old ones intensify Austral northern and altitudinal tree limits are determined by many different factors Current hypotheses for high latitude tree limits

are based on low growing season temperatures that inhibit plant development and reproduction Canada's Vegetation Geoffrey A.J. Scott,1995-01-10 Canada's Vegetation includes comprehensive sections on tundra forest tundra boreal forest and mixed forest transition prairie steppe Cordilleran environments in western North America temperate deciduous forests and wetlands An overview of each ecosystem is provided and equivalent vegetation types throughout the world are reviewed and compared with those in Canada The integration of data on climate soil and vegetation in a single volume makes this an invaluable reference tool Canada's Vegetation is sure to become a standard textbook for those in the environmental sciences

Geographic Index of Environmental Articles,1991 **Geomorphology** David J. A. Evans,2004 The seven volumes in this series contain reproductions of papers that the individual editors regarded as the initiators of critical concepts in geomorphology *American Beginnings* Frederick Hadleigh West,Constance F. West,1996-12 During the last Ice Age a thousand mile wide land bridge connected Siberia and Alaska creating the region known as Beringia Over twelve thousand years ago a procession of large mammals and the humans who hunted them crossed this bridge to America Much of the Russian evidence for this migration has until now remained largely inaccessible to American scholars American Beginnings brings together for the first time in one volume the most up to date archaeological and palaeoecological evidence on Beringia from both Russia and America An invaluable resource It will no doubt remain the key reference book for Beringia for many years to come Steven Mithen Journal of Human Evolution Extraordinary The fifty six contributors represent the most prominent American and Russian researchers in the region Choice Publication of this well illustrated compendium is a great service to early American and especially Siberian Upper Paleolithic archaeology Nicholas Saunders New Scientist This is a great book perhaps the greatest contribution to the archaeology of Beringia that has yet been published This is the kind of book to which archaeology should aspire Herbert D G Maschner Antiquity **Research Paper PNW.**,1978 Aquatic Ecosystems Nicholas V. C. Polunin,2008-09-11 Concern about future supplies of fresh water to society to meet the full range of human needs now comes very high on the priority list of global societal issues An overarching issue which this book addresses is whether global climate change is a dominant driver of change in the structure and function of all natural water based ecosystems or whether direct human population growth and accelerated consumption are playing an equal or greater role This book divides the whole aquatic realm into 21 ecosystems from those on land both saline and fresh water to those of the open and deep oceans It draws on the understanding of leading ecologists to summarize the state and likely condition by the year 2025 of each of the ecosystems Written for academic researchers and environmental professionals the aim is to put the climate change debate into a broader context as a basis for conservation science and planning Biodiversity in Managed Landscapes Robert C. Szaro,David W. Johnston,1996 The conservation of biodiversity has profound implications for managing natural resources with the need for scientific information as a foundation for management decisions increasing dramatically The intent of this book is to look beyond the theory of biodiversity to the principles practices and policies

needed for its conservation Its objectives are to provide the scientific basis for understanding biodiversity document case examples of theory and concepts applied at differing scales and examine policies that affect its conservation Holocene Treeline Oscillations, Dendrochronology, and Palaeoclimate Burkhard Frenzel, Hilary H. Birks, Torbjørn Alm, Karl-Dag Vorren, 1996 **Bibliography of Agriculture**, 1991-04 Canadian Journal of Botany, 1998 **Freshwater Diatoms from Northern Québec and Labrador (Canada)** Marie-Andrée Fallu, Nancie Allaire, Reinhard Pienitz, 2000 The freshwater diatom flora from arctic and subarctic regions of North America remains poorly known The aim of this investigation is to improve our knowledge of diatoms in lakes from eastern subarctic Canada and to provide a stronger foundation for the use of diatoms in limnological and palaeolimnological studies To this end we analysed the modern diatom assemblages in surficial sediments from 123 lakes in northern Québec and Labrador The two study transects in James Hudson Bay data set including 59 lakes and 38 environmental variables and in Québec Labrador data set consisting of 64 lakes and 29 environmental variables extend over a vast area from the boreal forest in the south to arctic tundra conditions in the north Of a total of 516 diatom taxa in the James Hudson Bay data set 218 species were used for the development of a transfer function for the reconstruction of dissolved organic carbon DOC In the Québec Labrador data set two inference models were developed for the reconstruction of water colour and alkalinity based on 128 of 303 diatom taxa The majority of taxa belonging to this surprisingly species rich boreal subarctic diatom flora are illustrated in photographic plates accompanied by a short description of the distribution of each taxon *Canadian Journal of Earth Sciences*, 2013 **Ecology**, 1996

Géographie Physique Et Quaternaire, 1995 *Ecology Abstracts*, 1991 Ecologists will find in this journal the essence of current ecology research across a wide range of disciplines reflecting recent advances in light of growing evidence regarding global environmental change and destruction Ecology Abstracts focuses on how organisms of all kinds microbes plants and animals interact with their environments and with other organisms Included are relevant papers on evolutionary biology economics and systems analysis as they relate to ecosystems or the environment With coverage ranging from habitats to food chains from erosion to land reclamation the journal provides an important cross section of current findings in target research areas Detailed information on resource and ecosystems management and modeling contributes to the journal's practical value as does material on the impact of climate water resources soil and man or growing environmental problems such as depletion erosion and pollution all topics which are covered in depth Comprehensive yet carefully focused coverage makes this an essential resource for scientists concerned with preserving the environment
