

CHAPTER 3

Subsurface Investigation Processes

3.1 Introduction

This chapter presents processes for developing the scope for the subsurface investigations that are typically conducted to collect subsurface data for planning, designing, constructing, and operating transportation facilities. The specific motivations may include selecting appropriate foundation types, determining if specialty construction means and methods are required, or estimating bid quantities. The scope of a subsurface investigation is typically governed by the types and amount of data that need to be collected to develop an appropriate ground model for the project to address these requirements. The scope is optimized by selecting the most appropriate and efficient methods and equipment for collecting and evaluating the required data. The topics covered in this chapter include the following:

1. Identifying the types of data required to address the anticipated geotechnical risks and performance issues
2. Determining the required appropriate type of data
3. Selecting the most appropriate investigation equipment for the anticipated site conditions
4. Selecting the appropriate scope for geophysical testing and the appropriate geophysical methods
5. Selecting the appropriate scope for *in situ* testing and the appropriate *in situ* tests
6. Selecting the appropriate sampling equipment and borehole advancing methods for the anticipated subsurface conditions
7. Selecting the appropriate type of measurements to evaluate groundwater conditions
8. Selecting the appropriate scope for laboratory testing and the appropriate laboratory tests

AASHTO R 13 (ASTM D420) contains complementary guidance on developing the scope of a geotechnical site investigation and selecting the appropriate geophysical, *in situ*, and laboratory test methods.

3.2 Types of Data Required for Subsurface Investigations

Determining the types of data required for an investigation is a critical step of investigation planning because the data drives the scope as well as the cost and schedule of the investigation activities. If inappropriate types of data are obtained or appropriate information is missed, data gaps will occur. The data gaps may require remobilizing to the field to collect the missing information, which will add to the investigation cost and could delay a project. An understanding of the primary factors that influence the types of information needed for an investigation is critical to developing a sound investigation plan. The remainder of this section discusses the three primary factors that govern the types of data that need to be collected and analyzed for an investigation:

- Subsurface investigation objectives
- Information that can be obtained from available records
- Information that can be obtained from a site reconnaissance
