

OPERATING INSTRUCTIONS

To operate the furnace:

1. Remove cabinet front.
2. Turn main gas valve control knob to the "OFF" position. (See Figure 1.)
3. Move "OFF" lever, located at bottom of thermostat, to the right if set on "OFF" position.
4. Set thermostat above-room temperature. A slight delay will occur before the blower starts.
5. Allow blower to run for five (5) minutes for combustion chamber purge cycle.
6. After five (5) minutes, set thermostat below room temperature.
7. Turn main gas valve control knob to "ON". (See Figure 1.) Correct operating characteristics depend on valve being positioned fully open. Never attempt to operate furnace with valve partially closed. Valve is fully open when handle is parallel to gas line.
8. Set thermostat above room temperature.
9. Allow 30 seconds for ignition to occur after the blower comes on.
10. If burner does not light, repeat Steps 2 through 9.
11. If after three (3) attempts with no ignition, go to shutdown and contact a qualified service agency. Do not continue to cycle furnace through thermostat in an attempt to get ignition.
12. After main burner ignition, replace cabinet front.

TO SHUT DOWN

1. Turn main gas valve control knob to "OFF". (See Figure 1.)
2. Set thermostat on "OFF".

PREVENTIVE MAINTENANCE

Your furnace should be inspected before use at least annually by a qualified service agency. Particular attention should be given to the following items:

1. Inspect combustion chamber and venting system for restrictions or obstructions. It is imperative that the flow of intake combustion air and the flow of exhaust gases being expelled to the outside atmosphere not be obstructed.
2. Inspect all gaskets. If any gaskets show signs of leakage or deterioration, replace them. Safe operation of the furnace depends on all gaskets being tight.
3. Inspect return air filter openings to the furnace. Remove any restrictions to assure adequate air flow.
4. Inspect main burner by removing the four (4) screws (A, B, C, D) securing the burner access door to the combustion chamber. (See Figure 1.) If screws not and burner are present on burner surface, the burner must be cleaned or replaced. The burner may be cleaned with a steel wire brush and the burner ports and venturi blown clean using compressed air.
